Project 2 - Market Intelligence System

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Ground Rules : Important

Ground rules for setting up an Azure Resources for this project

- Utilize the default resource group for all your tasks

NOTE: To optimize resource management, use the existing resource group i.e default_resource_group for all tasks in the project

- Avoid creating multiple resources and resource groups to ensure consistency, simplify monitoring, and reduce overhead
- Select Region = East US for the Azure AI Foundry
- Pricing tier: Standard S0 pricing tier
- If **Azure AI Foundry** has already been deployed, the setup process for it can be skipped, and the focus can shift directly to deploying the model(s)
- Allow 10 to 15 minutes for resources to become fully operational following its creation

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Instructions

- All screenshots should be clear, high-quality, and legible, ensuring that details are easily visible
- Wherever applicable, the learner's account details should be visible to verify ownership and authenticity
- Red boxes should be correctly placed to highlight the key steps in each screenshot, ensuring clarity and guiding the viewer through the process
- The overall structure and logical flow of the process must be maintained by placing each screenshot under the appropriate slide headers
- Learners should avoid skipping steps or presenting them in an incorrect order, as this can disrupt the coherence of the submission

Step 1 : Define Business context and objective

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

1.1 Problem Statement

Allied FinServ faces significant delays and inefficiencies in generating competitor and market intelligence reports. This is caused by a manual, fragmented, and resource-intensive research workflow. Analysts spend the majority of their time collecting and validating information from disconnected sources such as SEC filings, PDFs, news portals, and industry databases. This results in slow insight generation, inconsistent analysis quality, and limited scalability across multiple companies and markets.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

1.2 Business Context

In the fast-moving financial investment landscape, timely and accurate competitive intelligence is essential for informed decision-making. Allied FinServ's analysts must continuously monitor competitor performance, strategic moves, and market shifts. However, critical information is scattered across static documents and dynamic sources (news, press releases, analyst commentary). Manual extraction from PDFs, transcripts, and online sources creates bottlenecks and delays. It also has risks of oversight. As financial content grows across text, audio, and visual formats, traditional research methods are not enough.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

1.3 Objective

The objective is to build an automated Market Competitive Intelligence System using Azure AI Foundry's agentic workflow capabilities. The system will use Retrieval-Augmented Generation, web search tools, and specialized agents to automatically gather, extract, analyze, and synthesize market intelligence into a comprehensive competitor report. The goal is to reduce analysis time from days to minutes, improve accuracy, eliminate manual bottlenecks, and provide real-time, scalable insights for investment teams.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

1.4 Data Description

The system uses two primary data sources:

Static Documents (PDFs):

- Tesla's SEC filings, annual reports, and shareholder slide decks. These documents contain verified financial metrics, strategic updates, and operational insights. They are stored in a compressed folder (data.zip) and accessed using the File Search Tool.

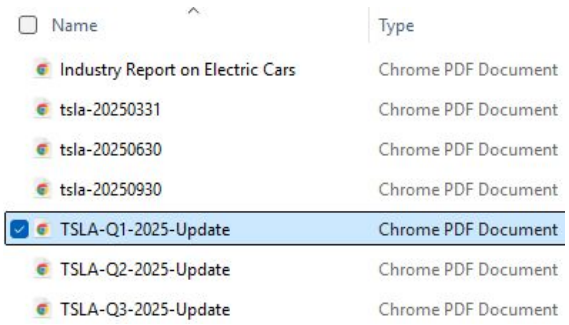

Dynamic Web Data:

- Real-time news articles, press releases, analyst commentary, and market updates retrieved using the Web Search Tool. This ensures the system captures the latest developments affecting Tesla and its competitors.

The combination of static and dynamic data enables the agent to produce a grounded, up-to-date, and comprehensive competitor analysis.

HIGHLIGHTS

Profitability

$0.4B GAAP operating income

$0.4B GAAP net income

$0.9B non-GAAP net income[1]

Cash

Operating cash flow of $2.2B

Free cash flow[2] of $0.7B

$0.4B increase in our cash and investments[3] to $37.0B

Operations

New Model Y ramp outpacing all past ramps

Megafactory Shanghai produced >100 Megapacks

Model 3, Model Y and Cybertruck now drive autonomously from production line to outbound lots in Fremont and Gigafactory Texas

[1] Excludes SBC (stock-based compensation) & Digital assets gains and losses, net of tax; [2] Free cash flow = operating cash flow less capex;

SUMMARY

In Q1, we accomplished an industry first: simultaneously changing over production lines across all factories for the world's best-selling vehicle[4] – the Model Y. The Tesla team successfully ramped our production lines across four factories while managing supply chains across three continents without any major disruptions, demonstrating the advancement of our operational and supply chain management capabilities.

AI is a major pillar of growth for Tesla and the broader economy and key to our pursuit of sustainable abundance. Furthermore, AI infrastructure is driving rapid load growth, which, along with traditional utility customer applications, is creating an outsized opportunity for our Energy storage products to stabilize the grid, shift energy when it is needed most and provide additional power capacity. While the current tariff landscape will have a relatively larger impac on our Energy business compared to automotive, we are taking actions to stabilize the busines in the medium to long-term and focus on maintaining its health.

Uncertainty in the automotive and energy markets continues to increase as rapidly evolving trade policy adversely impacts the global supply chain and cost structure of Tesla and our peers. This dynamic, along with changing political sentiment, could have a meaningful impact on demand for our products in the near-term. We remain committed to expanding our business model to include delivering autonomous robots across multiple form factors and use cases – powered by our real-world AI expertise – to our customers and for use in our factories, as we navigate these headwinds.

In the face of near-term profitability hurdles, the low-cost, localized manufacturing base that we have built provides advantages in delivering the best products at the right price to our customers globally. We continue to make critical, high-value investments while maintaining a strong balance sheet during this uncertain period.

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549
FORM 10-Q

(Mark One)

☒ QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the quarterly period ended March 31, 2025
OR

☐ TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the transition period from _____ to _____
Commission File Number: 001-34756

Tesla, Inc.
(Exact name of registrant as specified in its charter)

Texas	91-2197729
(State or other jurisdiction of incorporation or organization)	(I.R.S. Employer Identification No.)
1 Tesla Road Austin, Texas (Address of principal executive offices)	78725 (Zip Code)

(512) 516-8177
(Registrant's telephone number, including area code)

Securities registered pursuant to Section 12(b) of the Act:

Title of each class	Trading Symbol(s)	Name of each exchange on which registered
Common stock	TSLA	The Nasdaq Global Select Market

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 ("Exchange Act") during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes ☒ No ☐

Indicate by check mark whether the registrant has submitted electronically every Interactive Data File required to be submitted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit such files). Yes ☒ No ☐

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, a smaller reporting company, or an emerging growth company. See the definitions of "large accelerated filer," "accelerated filer," "smaller reporting company" and "emerging growth company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer	☒	Accelerated filer	☐
Non-accelerated filer	☐	Smaller reporting company	☐
Emerging growth company	☐		

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act. ☐

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes ☐ No ☒

As of April 16, 2025, there were 3,220,956,211 shares of the registrant's common stock outstanding.

1.5 Solution Methodology

The solution uses an agentic workflow with RAG and tool integrations to automate the competitor analysis pipeline:

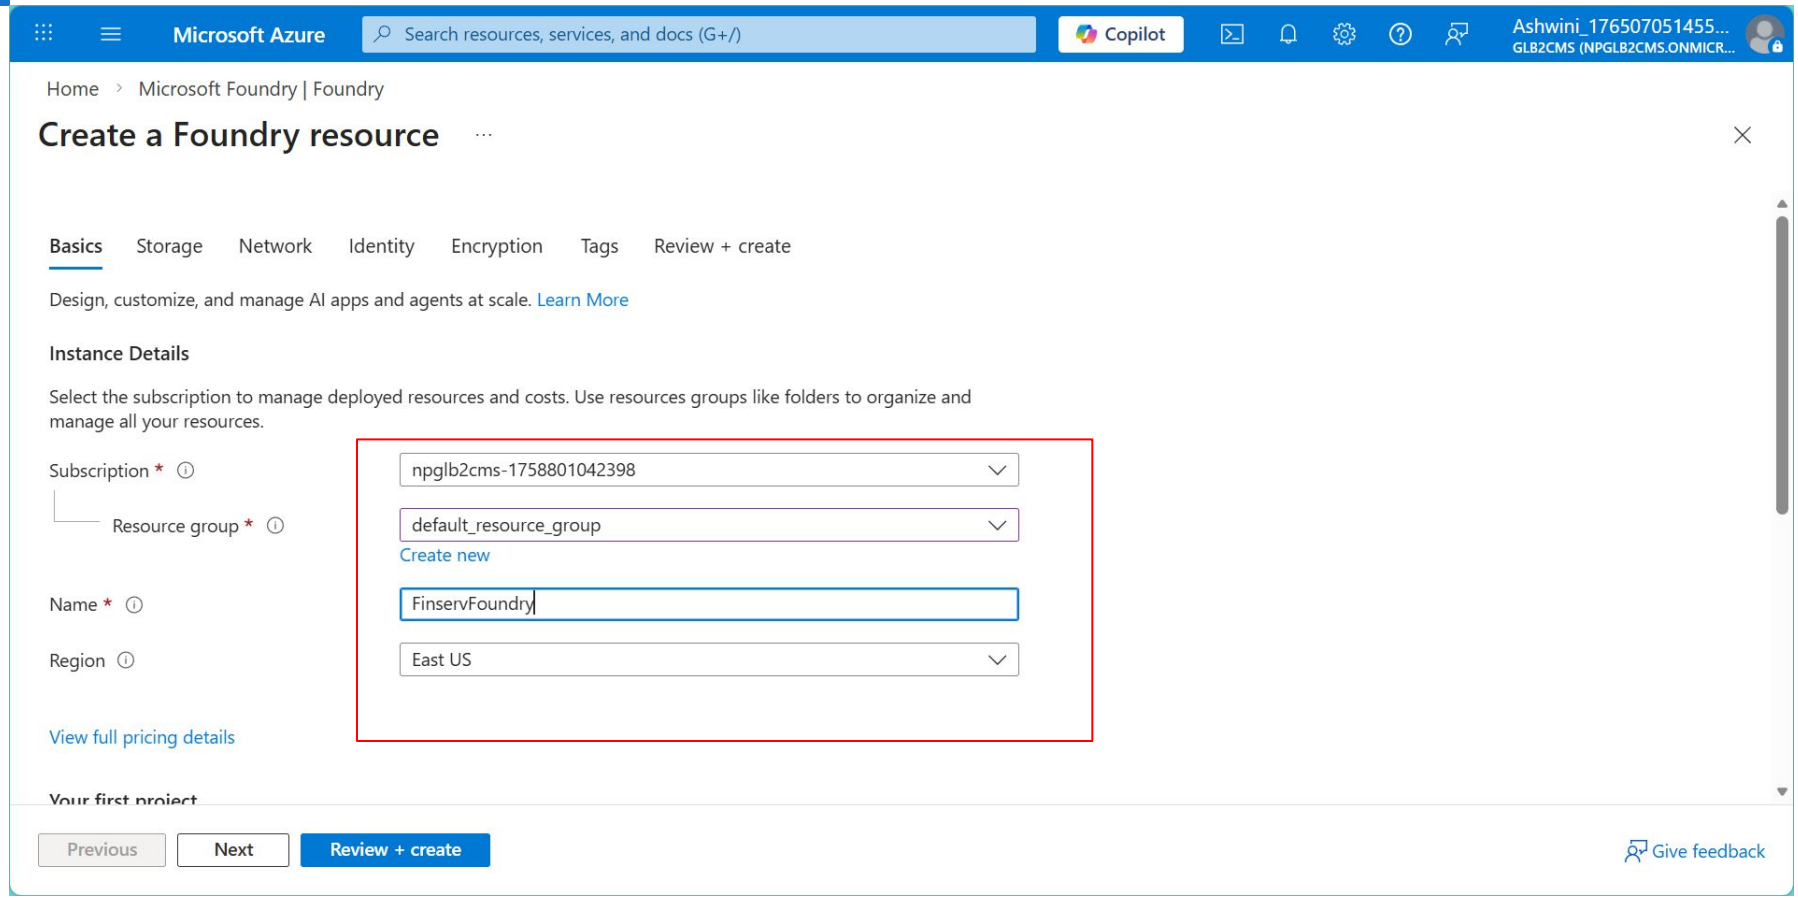

- Use File Search Tool to retrieve relevant sections from Tesla's PDFs.
- Use Web Search Tool to gather the latest market news and competitor updates.
- Use RAG to extract factual financial metrics and strategic insights from documents.
- Create three specialized agents:
  - Question-Generator Agent – Generates targeted research questions for the company.
  - Industry-Analysis Agent – Uses tools + RAG to gather and analyze information.
  - Report-Generator Agent – Synthesizes all insights into a structured competitor report.
- Build a workflow connecting all agents sequentially.
- Test the workflow using the company name Tesla.
- Produce the final competitor report as the output.

Step 3 : Deploying OpenAI Models

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

3.1 Model Selection

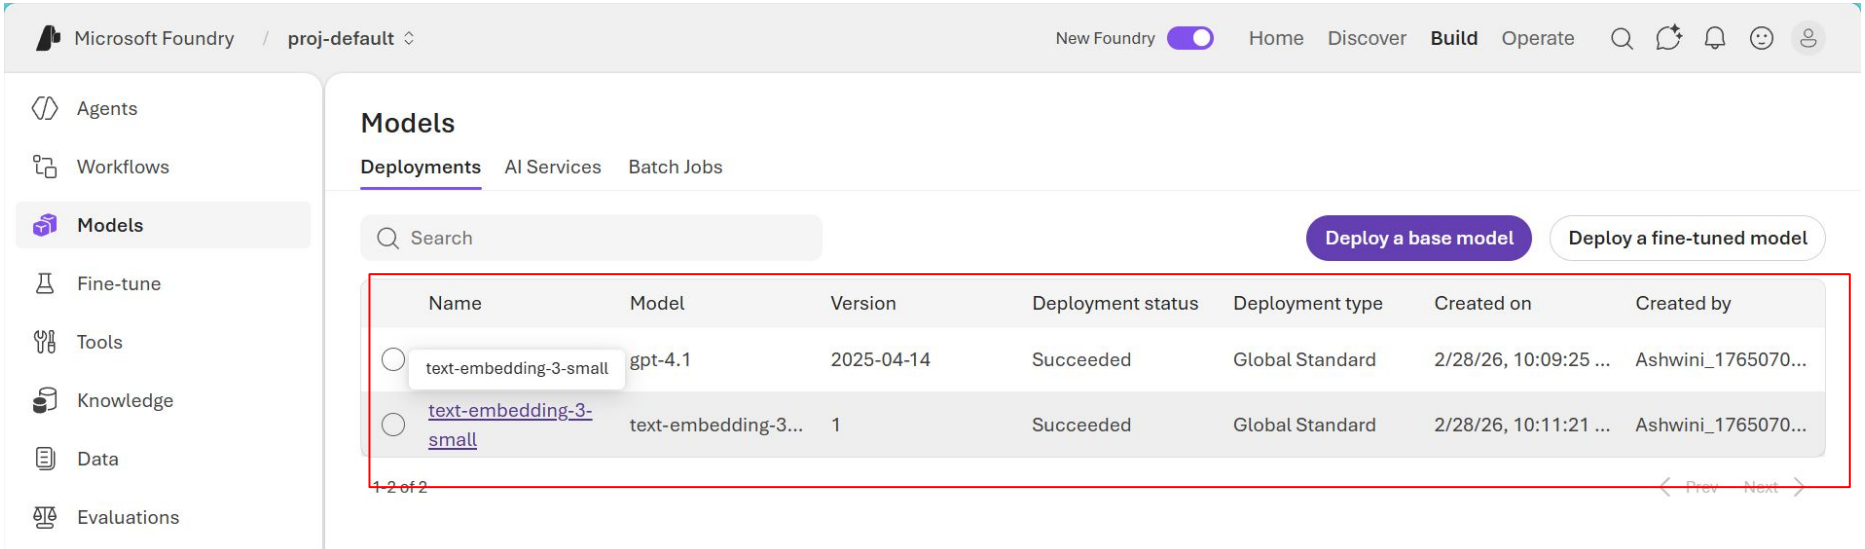

These models provide high accuracy, deterministic outputs (with low temperature), and strong performance in financial text analysis, making them ideal for generating reliable competitor intelligence.

Language Model – gpt-4.1
The selected generation model, gpt-4.1, has a strong reasoning, summarization, and analytical capabilities. It is used by all agents to interpret documents, analyze market data, and generate structured insights.

Embedding Model – text-embedding-3-small
This model is used by the RAG tool to convert PDF content into vector embeddings for accurate retrieval.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

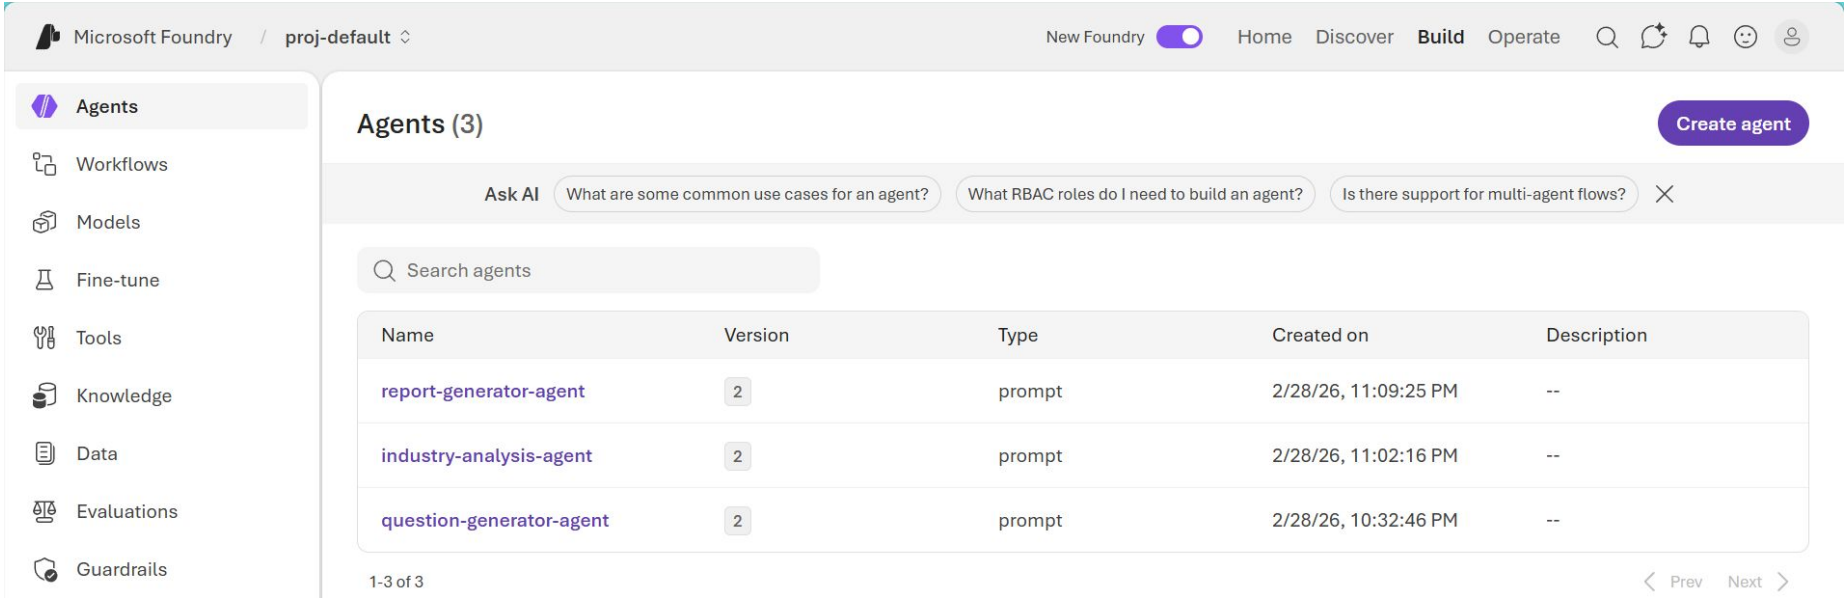

3.2 Model Deployment

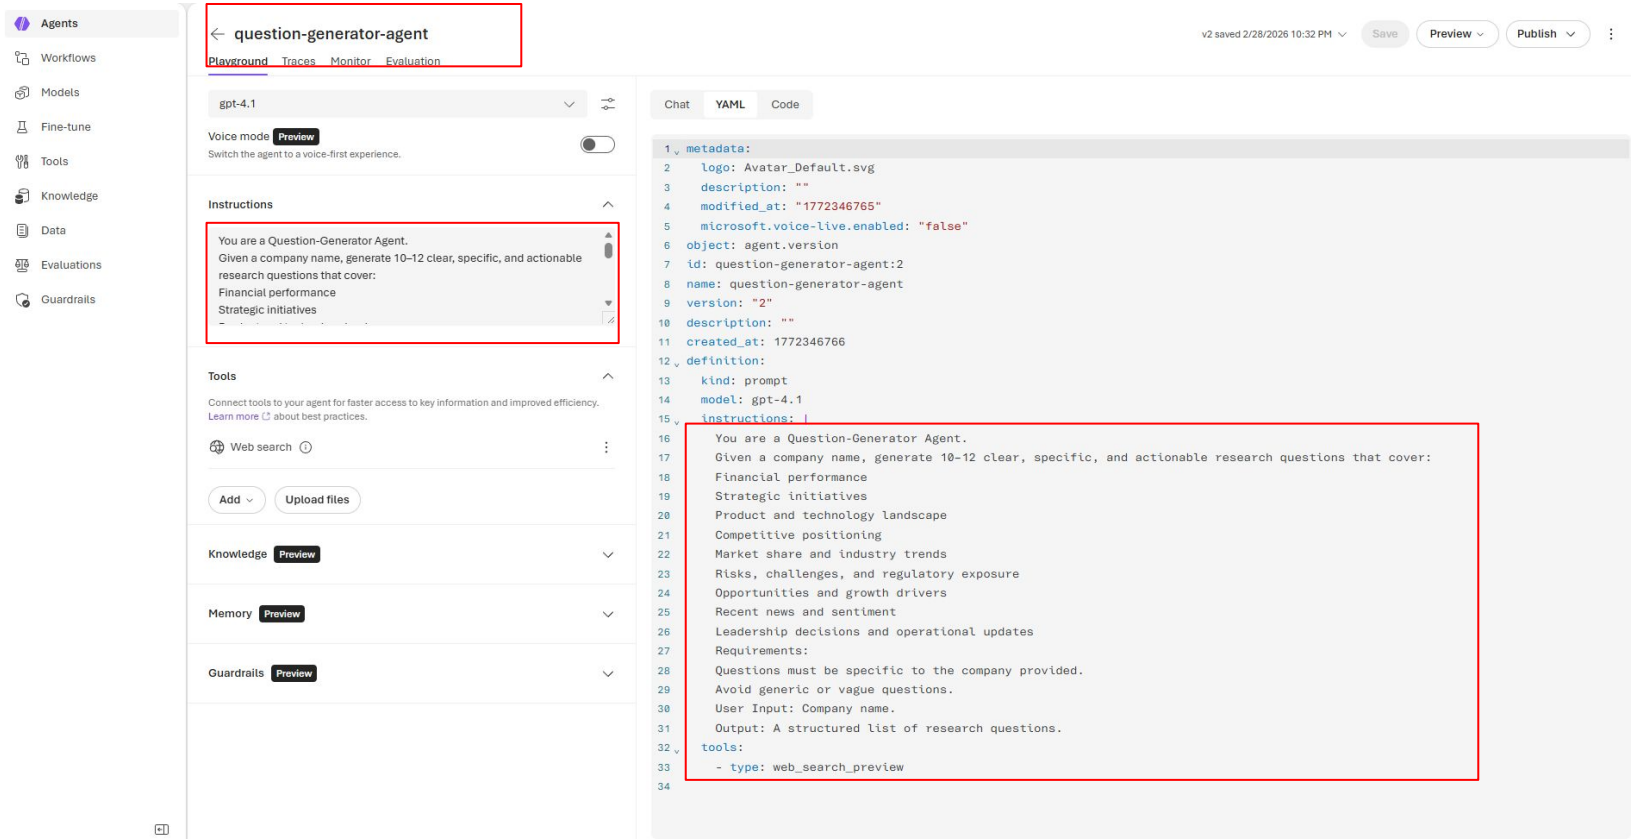

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Step 4: Agent Creation

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Output

Agent

Below is a comprehensive competitor intelligence report on Tesla, integrating recent financial filings, industry analysis, and up-to-date web sources, and grounded in the most recent available data.

Tesla Competitor Intelligence Report (2026)

Executive Summary

Tesla, Inc. remains the leading electric vehicle (EV) manufacturer and an influential technology conglomerate driving innovation across automotive, energy storage, solar, and the integration of AI and robotics. While its global leadership is supported by a strong brand, vertical integration, and robust product pipeline, the company faces margin pressures, intensifying competition (especially from China's BYD), regulatory risks, and shifting demand across its core markets. Near-term performance is closely tied to execution on high-stakes AI initiatives (notably Cybercab, Optimus Robot, and Full Self-Driving), as well as scaling of new Gigafactories. Investor sentiment remains watchful, with both upside and downside risk reflecting the company's dynamic evolution, ambitious R&D, and consumer/EU/Chinese macroeconomic headwinds【Tesla - DBS Bank】(https://www.dbs.com/content/article/pdf/US_clover/Tesla.pdf).

Input + Output | Metadata

Company Overview

Founded in 2003, Tesla designs, develops, manufactures, and sells fully electric vehicles, energy generation and storage systems, and operates globally across two main business segments:
- **Automotive:** Encompassing sales of vehicles (Model 3, Y, S, X, Cybertruck), FSD software, and automotive credits (81% of revenue).
- **Energy Generation & Storage:** Including Powerwall, Megapack, Solar Roof, and related services (9% of revenue).
- **Services/Others:** Non-warranty aftersales, supercharging, and merchandise (10% of revenue).

Tesla's mission is "to accelerate the world's transition to sustainable energy." In 2026, it pivots further toward AI-driven automation, deploying vertical integration across gigafactories (Texas, Berlin, Shanghai, Mexico, India in progress), owning a proprietary charging network, and leveraging in-house innovations in battery and AI hardware【About - Tesla】(https://www.tesla.com/about)【Tesla SWOT Analysis As Of 2026 [Detailed View] - RankRed】(https://www.rankred.com/tesla-swot-analysis/).

Financial Performance

- **Annual Revenue (2025/2026):** Approximately $94.8B (2025)[RankRed], with 2026 estimates in the $95–100B range as per recent analyst consensus【Tesla - DBS Bank】.
- **Profitability:** Automotive (ex-credits) gross margins at 17.2% (Q4 2025), but overall operating margins compressed to 2–6% in 2025 due to higher costs, R&D, and aggressive pricing. Net income and cash flow remain positive, though EBITDA and margins are under ongoing pressure as

Input + Output | Metadata

Strategic Initiatives & Growth Drivers

- **AI & Robotics:** Execution of AI-driven platforms (Cybercab robotaxi, Optimus humanoid factory automation, in-house AI chips/Dojo compute) as core growth pillars for 2026 and beyond【DBS Bank】.
- **Product Expansion:** Cybertruck ramp, Semi pre-production, and Roadster development, with focus on scaling Model Y refreshes for global markets.
- **Manufacturing Footprint:** Scaling new Gigafactories in Mexico and India (construction underway), extending localization of supply chain (4680 cells, lithium refining) for greater cost control and tariff mitigation.
- **Transition to Subscription:** Shift of FSD software to a recurring revenue model.
- **Megapack and Energy:** Major acceleration in grid-scale battery deployments, with Shanghai Megapack factory ramp.

Competitive Landscape

- **Peer Comparison:** Tesla retains ~19.9% global EV share and ~50% US EV share, but this figure has dropped from ~80% US share in 2020, reflecting increased competition from BYD, GM, Volkswagen, and others.
- **Key Differentiators:** Strong brand loyalty, Supercharger network, vertical integration, and tech innovation in batteries and software. However, price war dynamics and feature parity in EVs are eroding the differentiation gap.
- **China Challenge:** BYD and China-based OEMs have taken substantial share, particularly in affordable segments【RankRed】【DBS Bank】.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

5.10 Generated Report 2/2

Input + Output | Metadata

Recent News & Market Sentiment

- **Earnings Beat (Q4 2025):** Adjusted EPS exceeded consensus, but deliveries down YoY (-16%) and guidance cautious. Consensus expects volumes to recover (+8% in 2026) but faces risk if EV demand does not rebound or if AI-driven ventures (Cybercab, Optimus) miss timelines.
- **Innovation News:** High expectations for April 2026 Cybercab launch, FSD subscription model, and Fremont plant conversion to Optimus production【DBS Bank】.
- **Sentiment:** Generally mixed to neutral—a cautious optimism tied to tech pipeline is balanced by earnings pressure and regulatory headline risks, especially from China/EU tariffs.

SWOT Analysis

Strengths
- Market-leading global and US share in EVs.
- Advanced vertical integration and proprietary tech (4680 batteries, Supercharger).
- Diversification with Energy segment and software subscription experiments.
- Powerful brand and first-mover scale.

Weaknesses
- Falling global/US share; no longer unchallenged.
- Margin compression due to price cuts and heightened R&D spend.
- Legacy quality and recall perceptions persist.
- Dependence on Elon Musk's leadership and public persona.

Input + Output | Metadata

Opportunities
- Subscription and service-driven recurring revenue (FSD, Robotaxi/AI services).
- Expansion into India, Southeast Asia, and Latin America.
- Scale-up of Megapack for utility/grid energy storage.
- Further AI/Robotics applications (Optimus, physical AI).

Threats
- Chinese competition (BYD, XPeng, NIO) and affordable EV proliferation.
- EV tax credit expiration and global tariff escalation.
- Tech regulatory scrutiny and dependency on raw material supply chains.
- Slow global EV adoption and risk of overinvestment in unproven AI products【RankRed】【IIDE】.

Risks & Challenges

- **Execution Risk:** Near-term dependency on success of AI/robotics launches and FSD monetization.
- **Competitive:** Eroding share from price competition and established automakers' new EV models.
- **Regulatory:** Tariff and tax incentive changes in China, EU, and US.
- **Operational:** Margin compression from supply chain costs, delayed ramps (Cybertruck, Semi), and leadership concentration risk.
- **Financial:** Capital allocation to R&D and manufacturing expansion must result in scaling and return, or risks timeline slippage and cash flow tightening【DBS Bank】【Tesla 10-K/A】(http://pdf.secdatabase.com/1757/0001104659-25-042659.pdf).

Input + Output | Metadata

Final Recommendations

1. **Prioritize Execution on AI Initiatives:** Focus investor/market communications on tangible FSD, Cybercab, and Optimus milestones, with transparent timelines.
2. **Defend Margins Where Possible:** Explore targeted pricing elasticity and cost innovation, particularly in supply chain localization and advanced battery/AI chip production.
3. **Accelerate Energy Business Scale:** Leverage record Megapack/solar deploys as growth buffers against cyclical automotive downturns.
4. **Mitigate China and Regulatory Risks:** Deeper regional adaptation, local partnerships, and continuous monitoring of regulatory landscape are crucial.
5. **Leadership Bench:** Consider broadening and institutionalizing executive leadership beyond Musk to further bolster confidence and succession planning.

With aggressive competition in both EV and energy sectors and substantial execution risk tied to transformative AI ambitions, Tesla's future performance will be determined by its ability to deliver on innovation, scale efficiently, and adapt to shifting regulatory and demand conditions.

6. Conclusion : Key Takeaways and Expected Business Impact

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

6.1 Key Takeaways

- ★ Tesla's EV leadership is eroding as global share falls to ~19.9% and U.S. share drops from ~80% (2020) to ~50%, driven by aggressive competition from BYD and other Chinese OEMs.
- ★ Margins remain under sustained pressure due to price cuts, elevated R&D, and supply-chain costs, despite strong revenue and cash reserves.
- ★ AI and robotics define Tesla's next growth chapter, with Cybercab, Optimus, and FSD subscription models positioned as long-term value drivers.
- ★ Energy storage is scaling rapidly, with Megapack deployments hitting record levels, though still <10% of total revenue.
- ★ Regulatory and geopolitical exposure is rising, especially in China and the EU, where tariffs and incentive shifts could materially impact demand and cost structure.
- ★ Execution risk is elevated as multiple high-stakes product ramps (Cybertruck, Semi, 4680 cells, new Gigafactories) converge with uncertain EV demand.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

6.2 Expected Business Impact

- ★ **Shift toward high-margin recurring revenue** - FSD subscriptions and autonomous mobility (Cybercab) create a pathway to software-driven margins and reduced reliance on hardware cycles.
- ★ **Persistent margin volatility** - Price competition—especially from China—combined with heavy AI/robotics investment will continue to compress margins until new factories and 4680 cells scale.
- ★ **Energy business as a stabilizing force** - Megapack growth provides counter-cyclical resilience relative to automotive demand, strengthening diversification.
- ★ **Geopolitical and regulatory pressures reshape strategy** - Tariffs and local-content rules may accelerate Tesla's localization efforts (Mexico, India) and force supply-chain diversification.
- ★ **Valuation increasingly tied to AI execution** - Investor sentiment hinges on Tesla delivering tangible milestones in FSD, Cybercab, and Optimus; success could unlock multi-billion-dollar markets, while delays amplify downside risk.
- ★ **Leadership concentration remains a structural vulnerability** - Heavy reliance on Elon Musk introduces volatility in governance, execution, and market perception.
