Project 3 - Travel RAG Chatbot Project

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Ground Rules : Important

Ground rules for setting up an Azure Resources for this project

- Utilize the default resource group for all your tasks

NOTE: To optimize resource management, use the existing resource group i.e default_resource_group for all tasks in the project

- Avoid creating multiple resources and resource groups to ensure consistency, simplify monitoring, and reduce overhead
- Select Region = East US for the Azure AI Foundry
- Pricing tier: Standard S0 pricing tier
- If **Azure AI Foundry** has already been deployed, the setup process for it can be skipped, and the focus can shift directly to deploying the model(s)
- Allow 10 to 15 minutes for resources to become fully operational following its creation

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

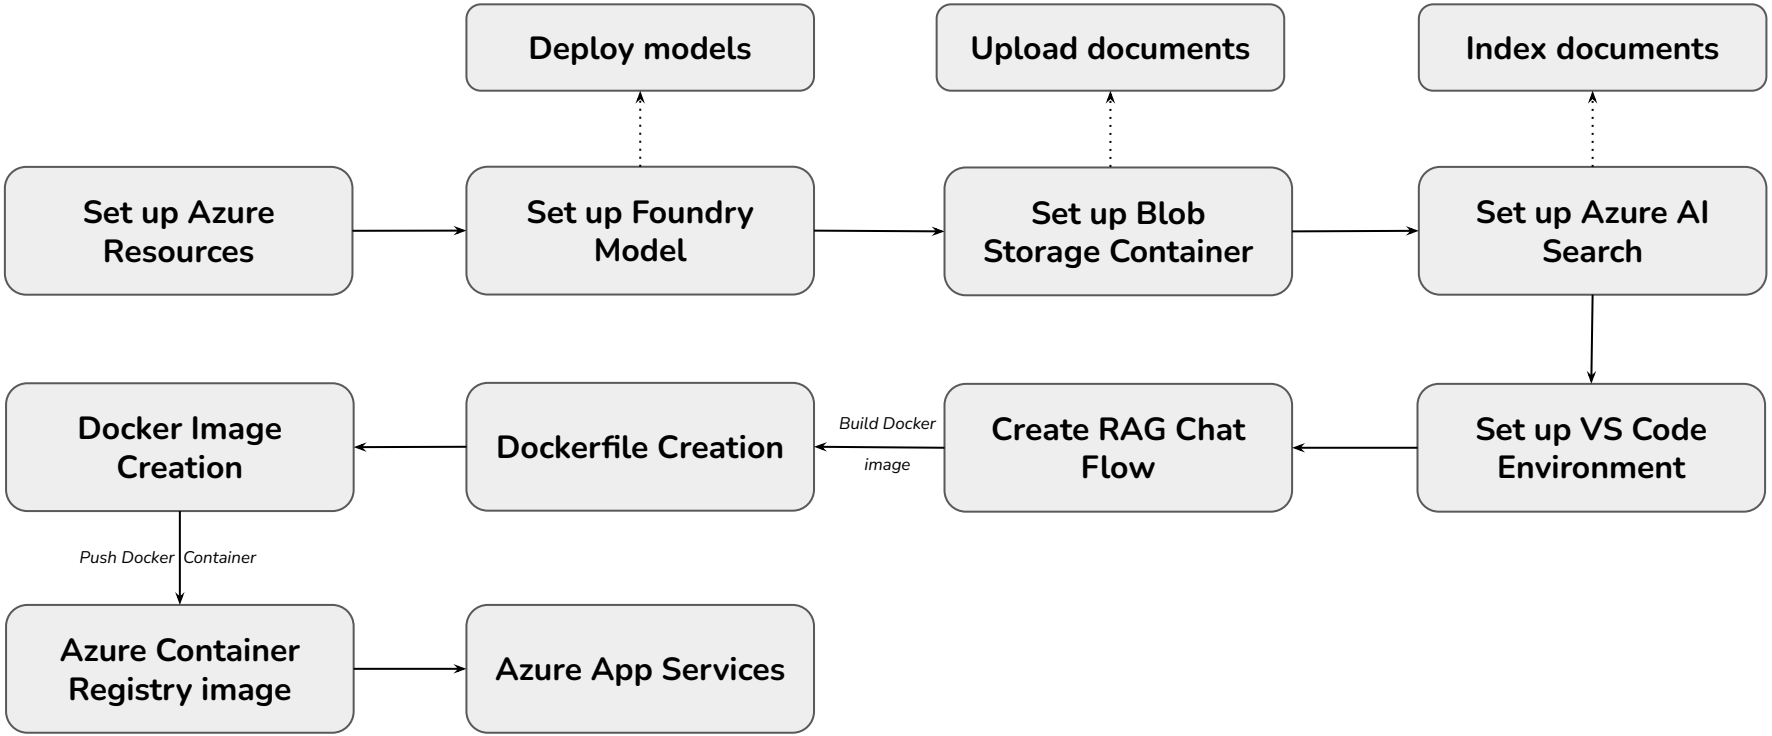

Instructions

- All screenshots should be clear, high-quality, and legible, ensuring that details are easily visible
- Wherever applicable, the learner's account details should be visible to verify ownership and authenticity
- Red boxes should be correctly placed to highlight the key steps in each screenshot, ensuring clarity and guiding the viewer through the process
- The overall structure and logical flow of the process must be maintained by placing each screenshot under the appropriate slide headers
- Learners should avoid skipping steps or presenting them in an incorrect order, as this can disrupt the coherence of the submission

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Overall Workflow

Use the following workflow as a reference for this project

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Instructions

- The validation of the Retrieval-Augmented Generation (RAG) application will be conducted in two distinct phases
- The initial phase involves benchmarking the chatbot performance against the static document corpus using a dedicated baseline query set
- In the second phase, additional data from **document_updates.zip** will be ingested into Azure Blob Storage
- The Azure AI Search indexer must be configured to perform an incremental update to synchronize the search index with these new assets
- Finally, the application's retrieval accuracy and response generation will be verified using a second query set specifically targeting the updated content

Step 1 : Define Business Contexts and Objectives

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

1.1 Business Context

WanderNest Travels is a mid-sized online travel agency serving over **500,000+ users annually**, operating in a highly dynamic travel environment where policies, routes, and regulations change rapidly. Customers increasingly expect **real-time clarity** on disruptions, baggage rules, visa requirements, and fare changes. However, traditional static FAQs and generic chatbots fail to keep pace with these evolving conditions. This creates a pressing need for an intelligent, adaptive system that can deliver **accurate, context-aware answers instantly**.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

1.2 Problem Statement

Travelers frequently face uncertainty due to **weather disruptions, last-minute airline policy changes, visa rule updates, strikes, and operational delays**. Human agents currently take **10–15 minutes per query**, relying on fragmented sources like PDFs, advisories, and news feeds.

This leads to:

- High booking abandonment
- Customer dissatisfaction
- Inconsistent or outdated responses
- Revenue loss and reputational damage

Static systems cannot handle the **dynamic nature of modern travel**, especially for high-traffic routes like BLR–LON, DEL–JFK, and BOM–DXB.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

1.3 Business Objective

The goal is to build a **RAG-powered, LLMOps-aligned travel assistant** that retrieves answers from a static knowledge base (policies, fares, FAQs) while dynamically incorporating **real-time updates** from newly uploaded documents.

The chatbot should:

- Provide **instant, accurate, policy-grounded answers**
- Reduce agent workload by automating first-line queries
- Improve customer trust and reduce drop-offs
- Support **incremental updates** without code changes
- Maintain compliance with airline and regulatory policies

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

1.4 Data Description

The dataset consists of two categories: **Static Data**

- Airline policies
- Ticket refund rules
- Baggage allowances
- Fare rules
- Voucher and disruption handling guidelines

Dynamic Data (Post-Deployment Updates)

- Weather disruptions
- Personnel strikes
- Airport/immigration policy changes
- Flight cancellations and delays
- New visa requirements
- Airline advisories

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

1.5 Solution Methodology 1/2

The solution follows a structured, Azure-native RAG pipeline:

1. Azure Resource Provisioning

- Deploy Azure AI Foundry, Azure OpenAI, Blob Storage, AI Search, ACR, and App Service.

2. Data Ingestion & Indexing

- Upload static documents to Blob Storage.
- Configure Azure AI Search with vector indexing and an **incremental indexer** to capture new updates.

3. RAG Pipeline Construction (Prompt Flow)

- Create Azure OpenAI and AI Search connections.
- Implement the **retrieval.py** Python node for vector search.
- Build the LLM node with a grounded chat template.
- Connect nodes to form the complete RAG flow.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

1.5 Solution Methodology 2/2

4. Containerization & Deployment

- Generate Dockerfile via Prompt Flow.
- Build and push the Docker image to ACR.
- Deploy the containerized app to Azure App Service.

5. Validation & Continuous Updates

- Test baseline queries on the initial corpus.
- Upload new documents (dynamic_data.zip).
- Re-index using Azure AI Search.
- Validate updated queries to ensure the chatbot reflects new information.

This methodology ensures a **scalable, compliant, real-time travel assistant** that evolves with the industry.

2.1 Azure AI Foundry Interface

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Foundry Model Deployment

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

2.2 Model Selection

Chosen Model: GPT-5- Mini

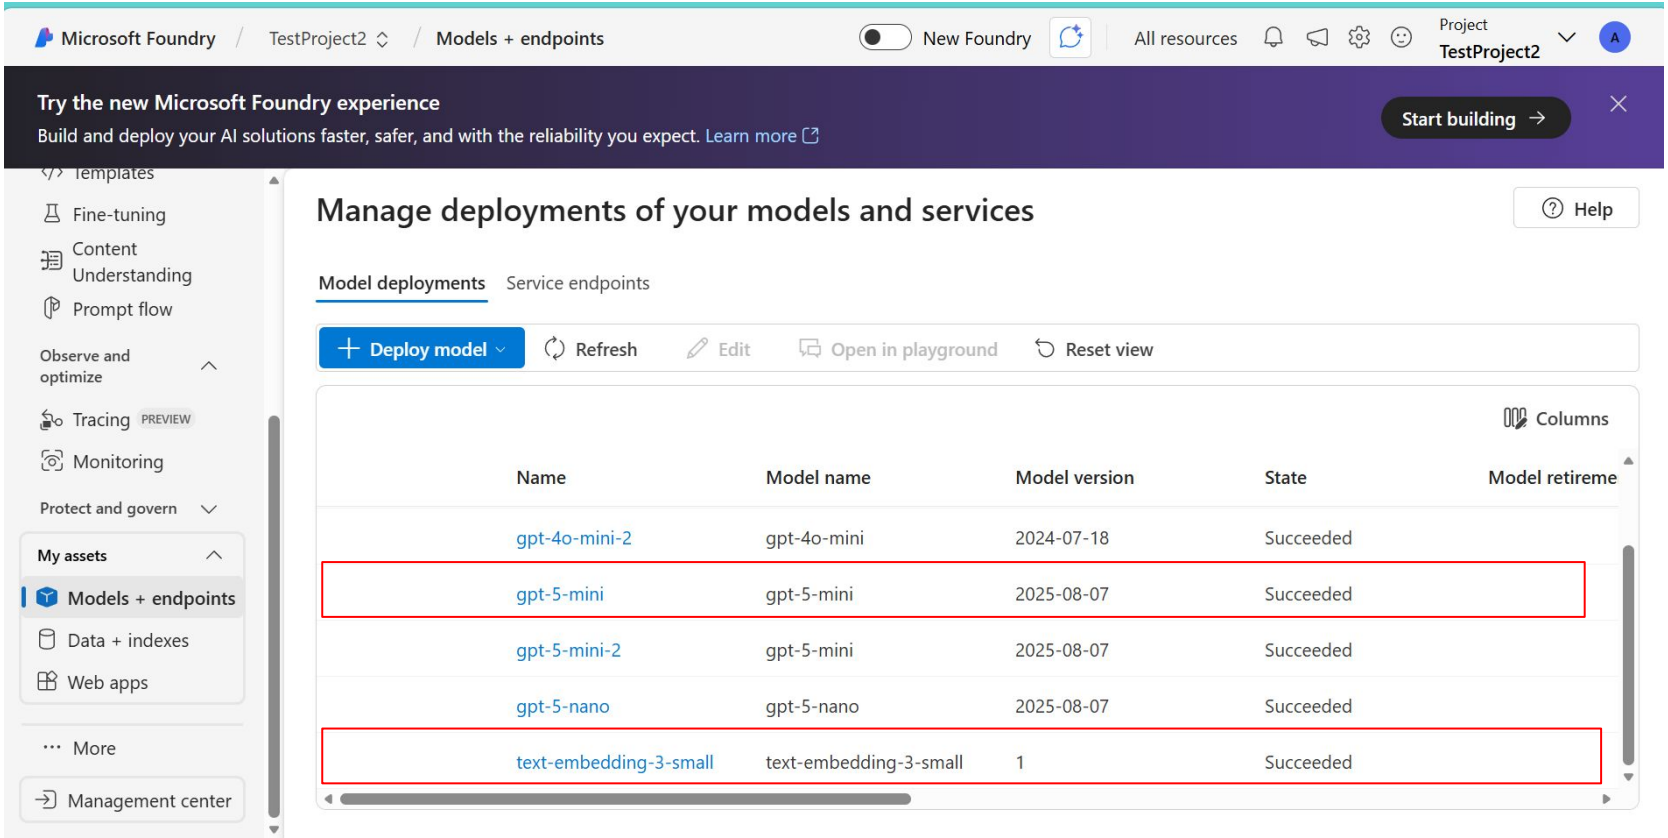

- Optimized for **fast, cost-efficient inference** suitable for high-volume travel queries.
- Strong **contextual reasoning** for interpreting policy documents and real-time updates.
- Supports **structured prompting** for RAG workflows.
- Ensures **enterprise-grade security, compliance, and reliability** required for travel operations.

Embedding Model – text-embedding-3-small

- This model is chosen for its cost-effective and high-quality vector generation capabilities.
- It efficiently converts textual content from insurance policy documents into dense embeddings, enabling semantic understanding and relevant document retrieval while maintaining low latency and cost.

3.7 Create LLM Node

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

3.8 Run and test the RAG flow: Query 1

```
{
  "search_connection":
"azure_aisearch_connection",
  "index_name": "rag-1775871853403",
  "query": "My flight was significantly changed and
I declined the rebooking. What are my rights?"
}
```

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

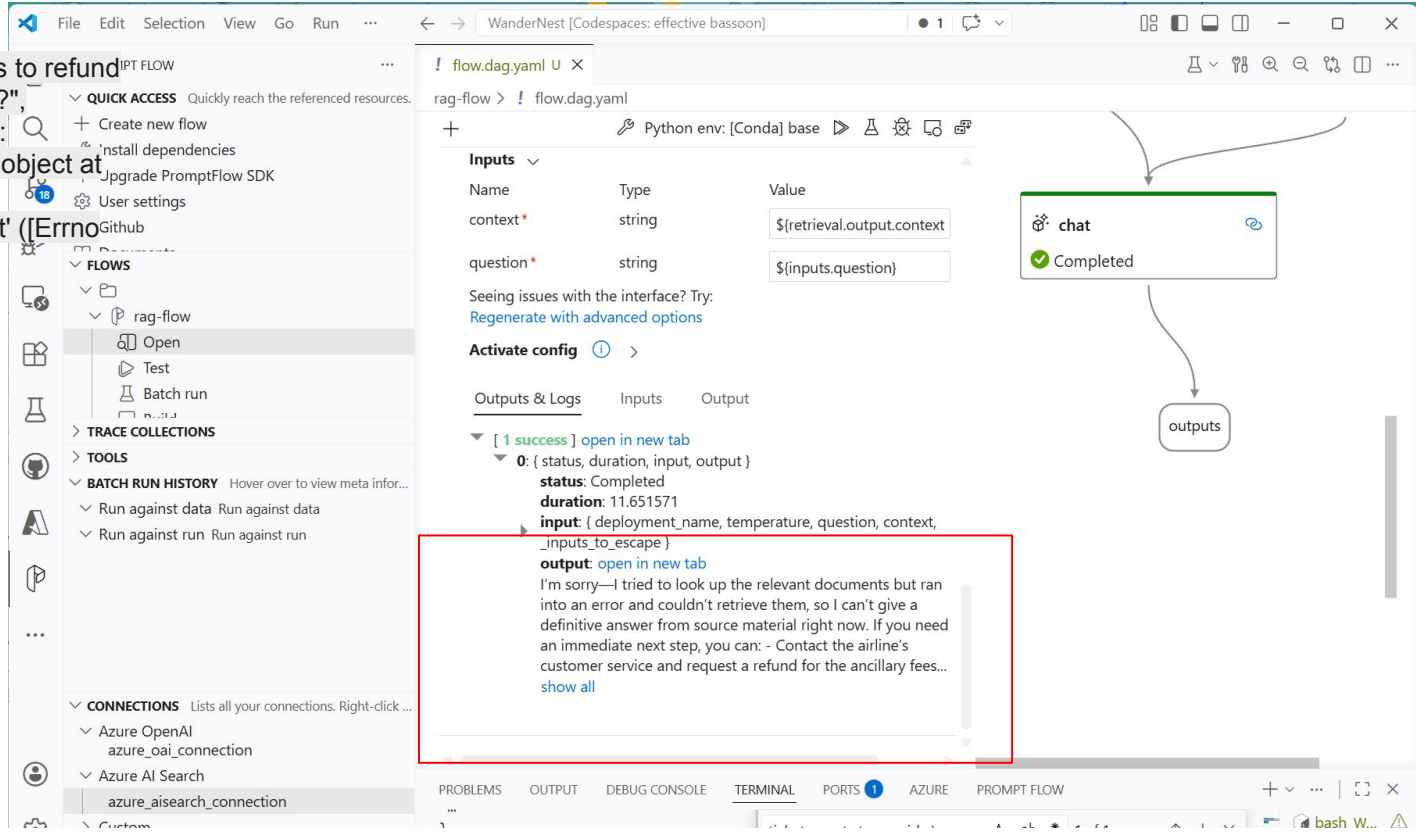

Detailed answer was provided- Query 1 output sample below

You have the right to a refund if the change to your flight qualifies as a “significant change.” What that means - The law defines what counts as a “significant change.” If your airline’s change meets that legal definition, you may elect not to travel and request a refund — even if you bought a non-refundable ticket. - If you bought a fully refundable ticket, the airline or ticket agent should provide a refund or other alternatives per the fare terms. What to do now 1. Request a refund from the airline or ticket agent (or the travel agent who sold the ticket). Tell them you are declining the rebooking because the schedule was a significant change and you want a refund. 2. If the airline or agent refuses or is in bankruptcy or has ceased operations, consider these options: - Credit card: If you paid by credit card and are entitled to a refund, file a dispute/claim with your card issuer as soon as possible. When you write, use the address on your statement for disputing charges and include: - Your account number; - A copy of the ticket, itinerary, or receipt; - Which segments (if any) were used and which were unused; - A statement that the airline is in bankruptcy or ceased operations (if applicable), you did not receive the service, and you are requesting a credit under the Fair Credit Billing Act. - Note: Generally the issuer must receive your notice no later than 60 days after the first monthly statement that listed the charge, though some issuers may waive that deadline for future travel. - Debit card: Contact your debit card issuer to ask if they offer reimbursement protections for the purchase. - Travel insurance: If you bought travel insurance, contact your insurer to see if the policy covers the change and your cancellation. - Bankruptcy option: If the airline or ticket agent is in bankruptcy you may file a proof of claim in the bankruptcy case, but passengers are typically unsecured creditors and may receive only a small portion of amounts claimed after higher-priority debts are paid. If you want, tell me whether you paid by credit card, debit card, or have travel insurance and whether the airline is still operating or has entered bankruptcy, and I’ll outline the best next steps you can take.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

3.8 Run and test the RAG flow: Query 2 - if there is an issue with connection, the output from the chatbot is not the same (expected)

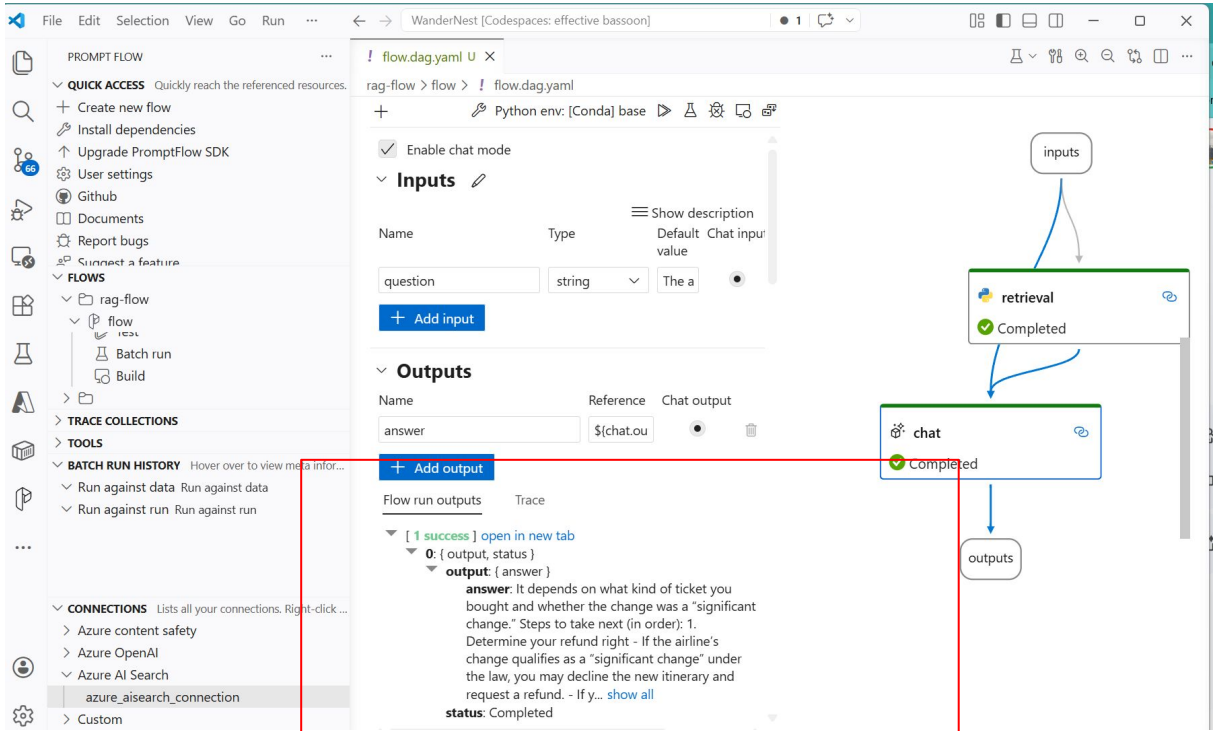

```
{
  "deployment_name": "gpt-5-mini",
  "temperature": 1,
  "question": "Does DOT require airlines to refund ancillary fees when a flight is canceled?",
  "context": "Error retrieving documents: <urllib3.connection.HTTPSConnection object at 0x781400137380>: Failed to resolve 'wandernestsearch.search.windows.net' ([Errno -2] Name or service not known)",
  "_inputs_to_escape": [
    "question"
  ]
}
```

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

3.8 Run and test the RAG flow: Query 3

The airline changed my itinerary and I declined the new flight. What should I do next?

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Query 3 output ⅓ - very detailed (normal) output by chatbot

It depends on what kind of ticket you bought and whether the change was a “significant change.” Steps to take next (in order):

1. Determine your refund right
- If the airline’s change qualifies as a “significant change” under the law, you may decline the new itinerary and request a refund.
- If you bought a fully refundable ticket, contact the airline or ticket agent and request a refund or alternatives.
- If you bought a non-refundable ticket and the change is not a “significant change,” you generally are not entitled to a refund.

2. If the airline or ticket agent won’t (or can’t) refund you
- If the airline or ticket agent has gone out of business or the airline has ceased flying, you still may be able to recover money through:
  - Your credit card company (file a dispute/chargeback),
  - Your debit card issuer (some issuers offer voluntary protections—contact them), or
  - Your travel insurance (if you purchased a policy).

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Query 3- Output 2/3

3. How to dispute with your credit card company (if you used a credit card)
- File a claim as soon as possible. Send the dispute to the address on your statement for disputing charges (may different from the payment address). Include:
  - Your account number,
  - A photocopy of the ticket, itinerary, or receipt,
  - Identification of any used and unused segments,
  - A statement that the airline is in bankruptcy/ceased operations (if applicable), you did not receive the ser charged, and you are requesting a credit under the Fair Credit Billing Act.
- Note the usual 60-day deadline: the issuer generally must receive your notice no later than 60 days after the monthly statement showing the charge (issuers sometimes waive deadlines for future transportation).

4. If you used a debit card
- Contact the debit-card issuer promptly to ask whether they will reimburse or provide any protection.

5. If you have travel insurance
- Check your policy and contact the insurer to see if the change or cancellation is covered and to start a claim

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Query 3 : Output 3/3

6. If you are stranded away from home
- See if other airlines will accept your ticket (confirmed or standby) or will waive restrictions/offer a discounted new ticket.
- Contact your travel insurance before making alternative travel arrangements, if you have it.
- For overseas emergencies, consult U.S. State Department resources (Crisis Response / Emergencies Abroad / Help Abroad) if applicable.

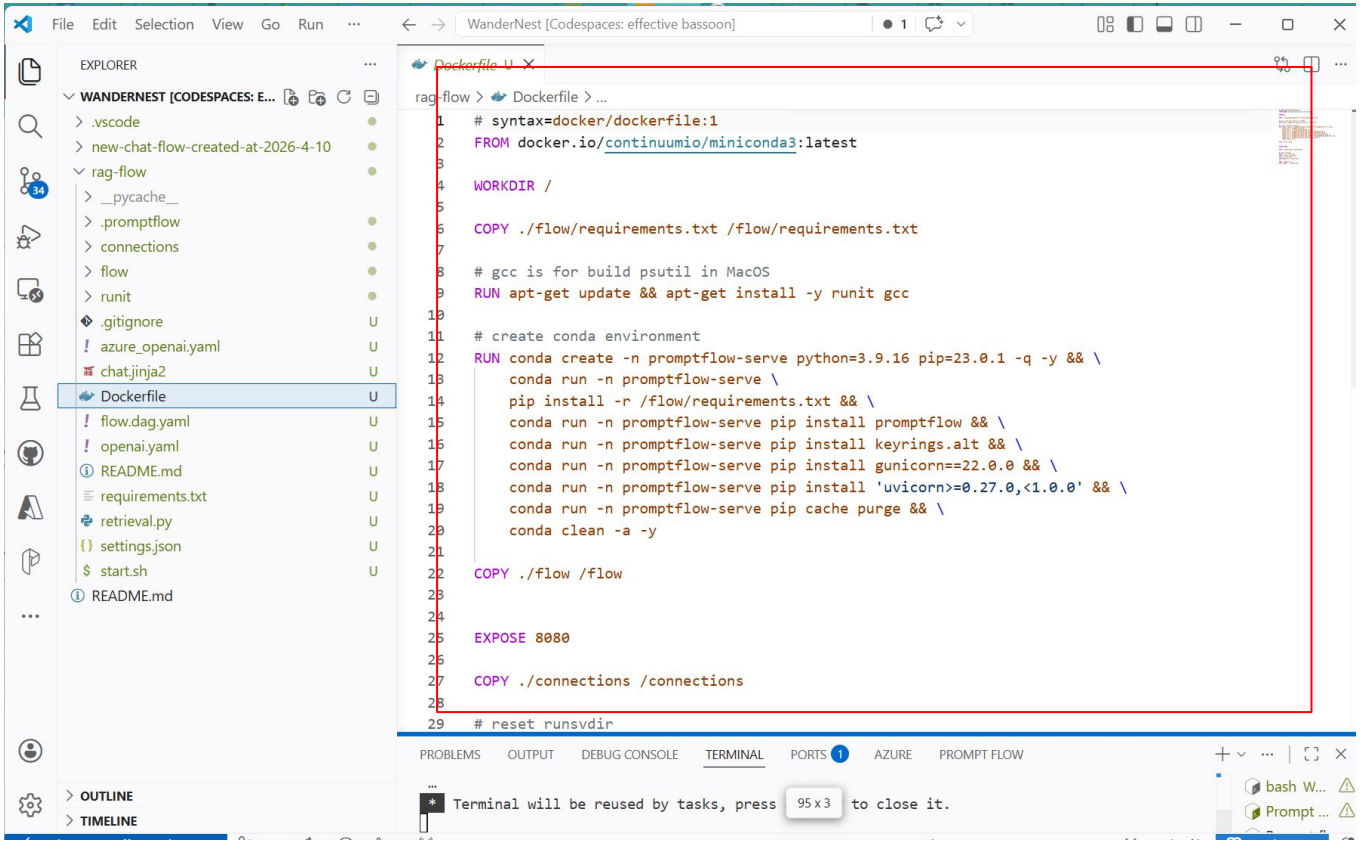

Keep careful records of all communications, copies of tickets/itineraries, receipts, and any offers the airline made — you will need them for disputes or insurance claims. If you want, tell me whether your ticket was refundable and whether the airline described the change as "significant," and I can give more specific next steps.

Step 4 - Build the Docker Image and Push the Docker Image to Container Registry

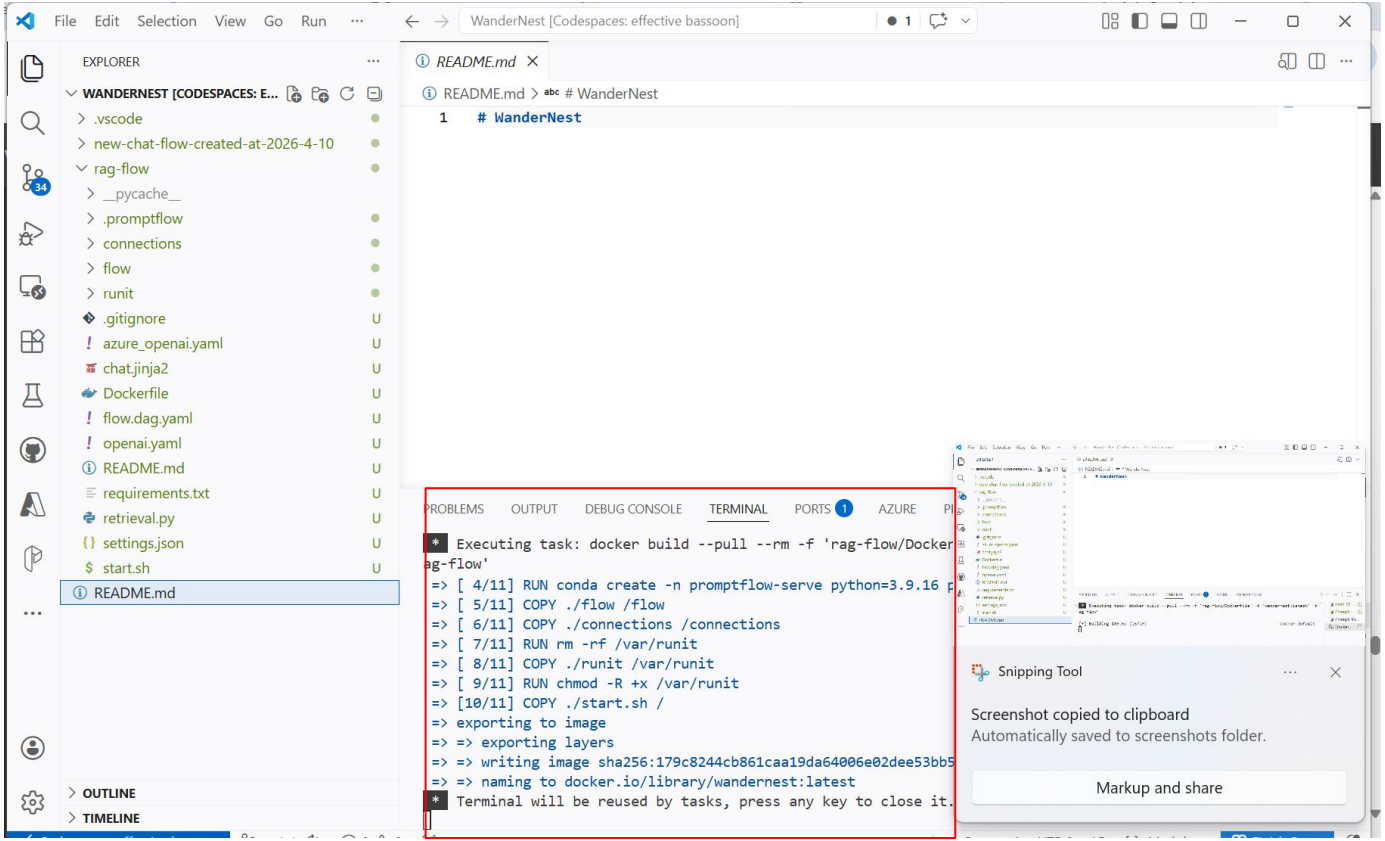

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

4.1 Create the Docker image

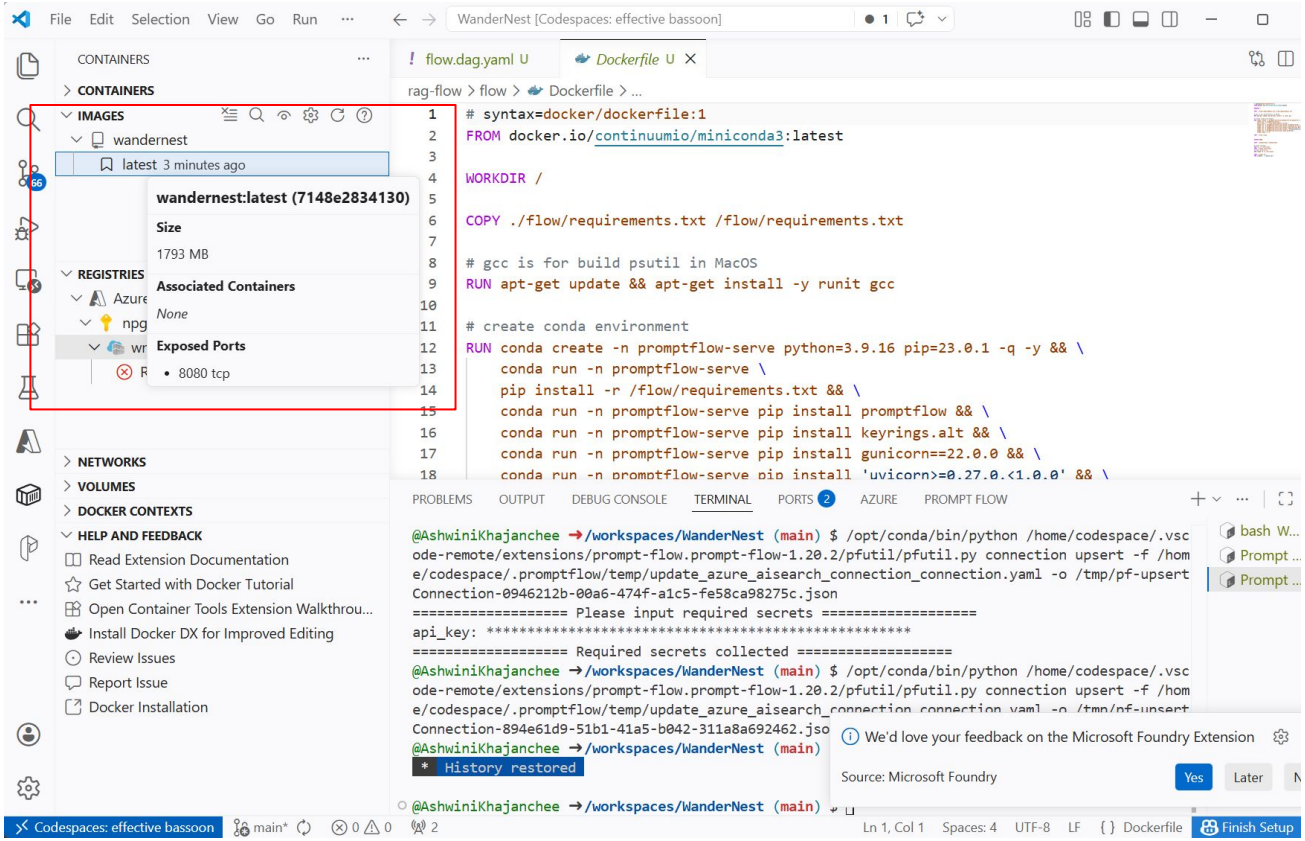

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

4.2 Build the Docker Image

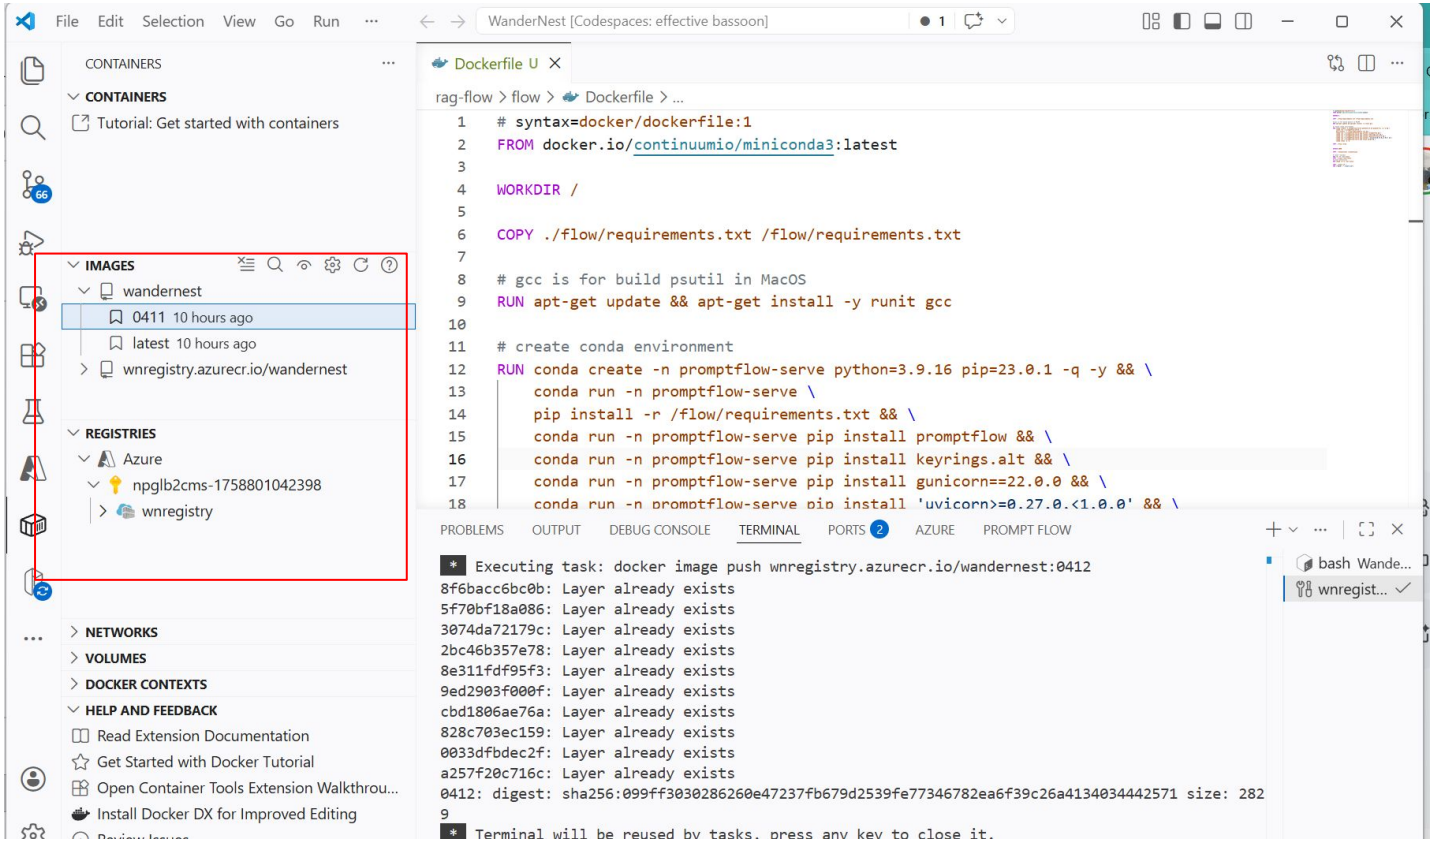

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Docker image build

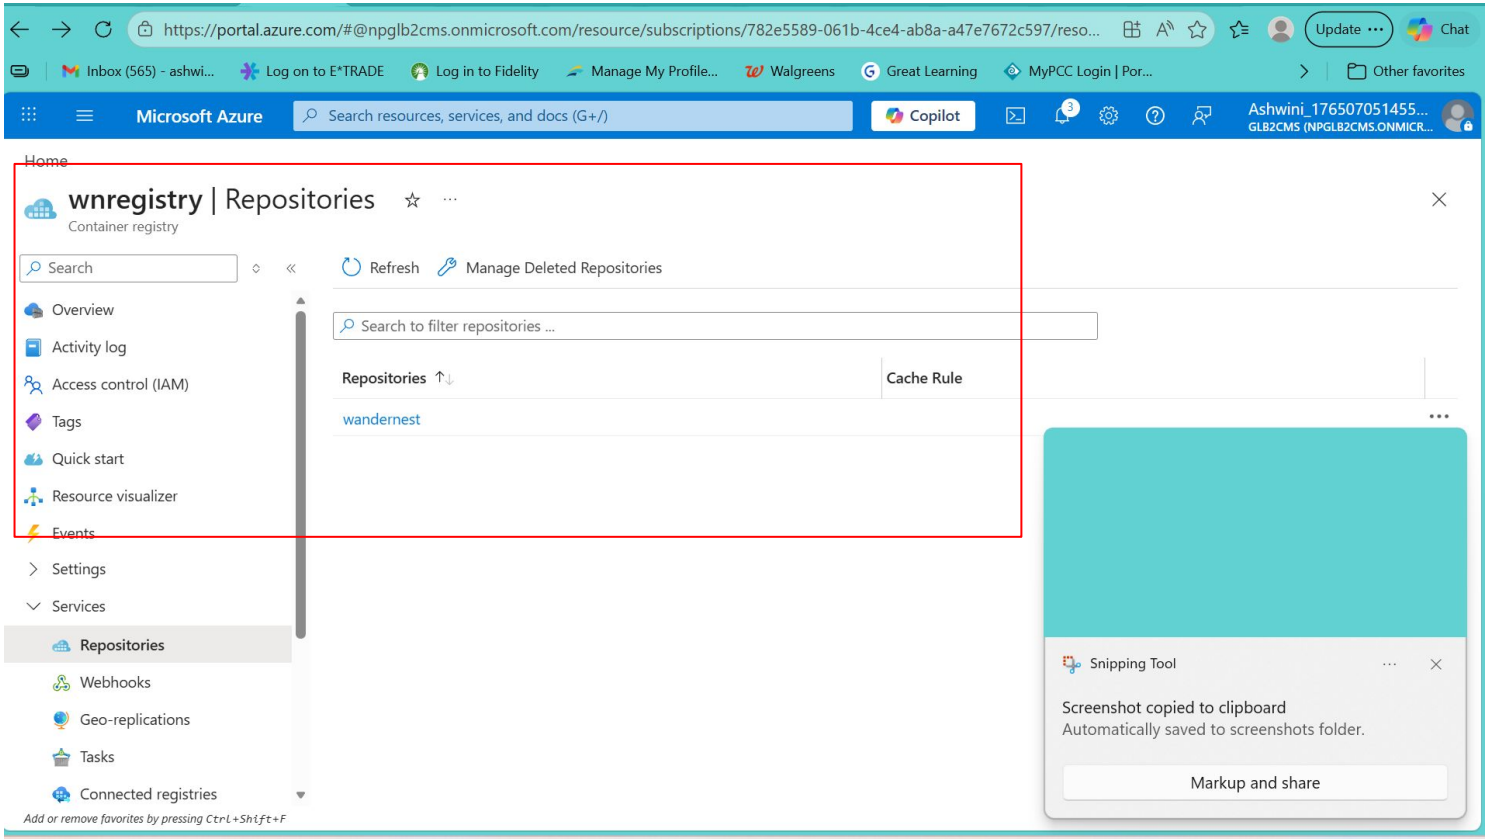

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

4.3 Push the Docker Image to ACR

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

4.4 Navigate to ACR to verify the new Docker Image

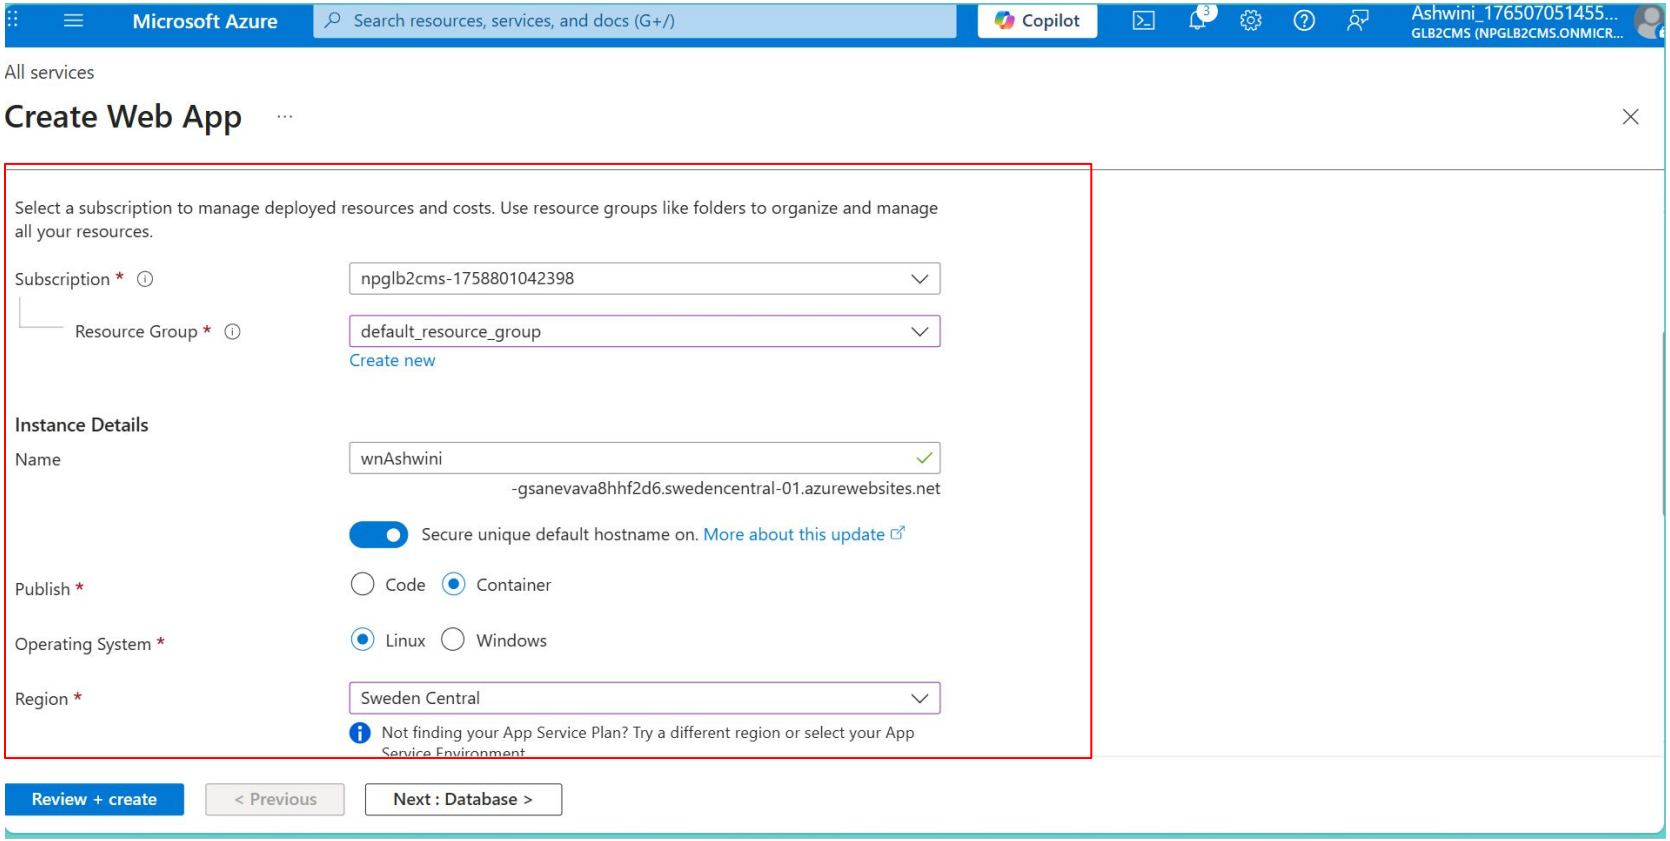

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Step 5 - Deploying Chat Flow to Azure App Services

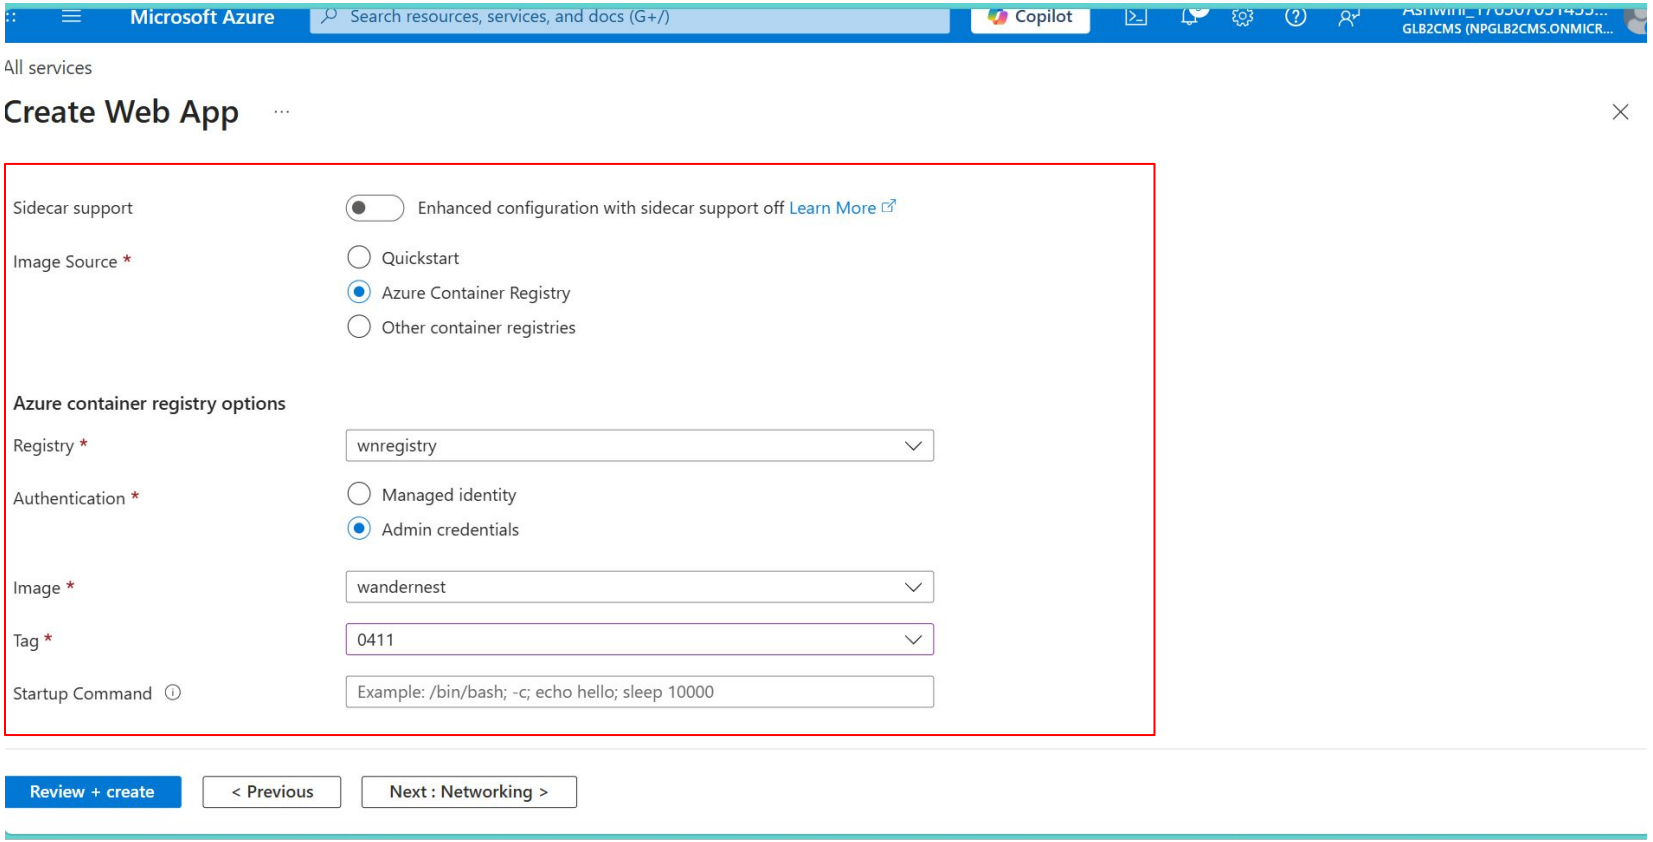

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

5.1 Create Azure App Services instance

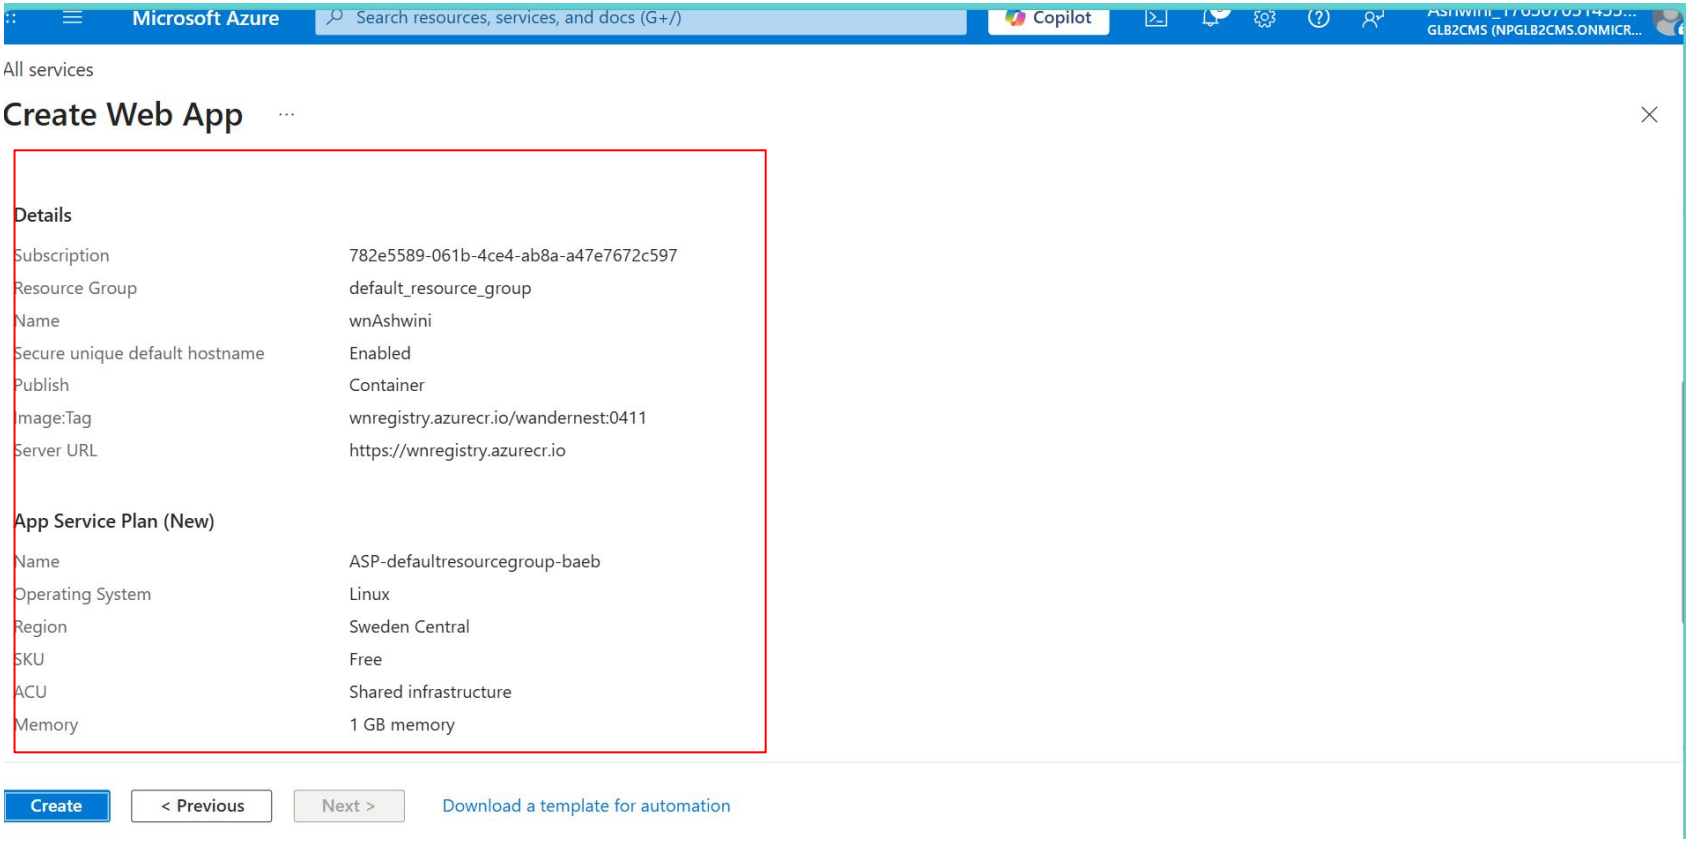

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Creating the Web app

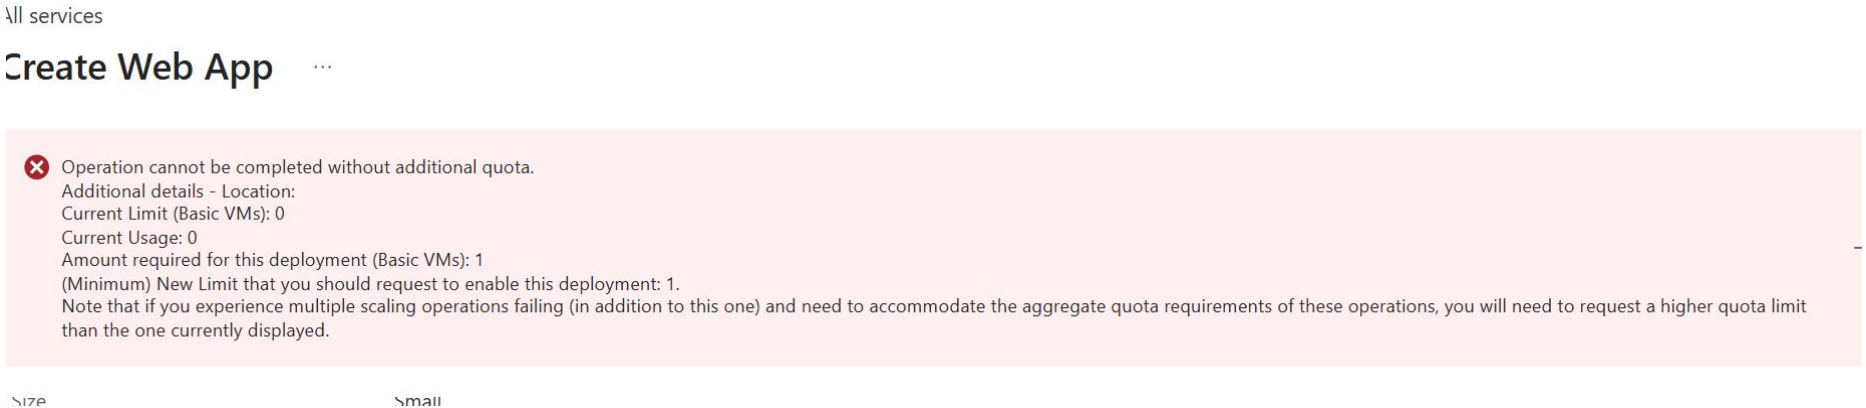

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Creating the Web app

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

5.2 No quota on East US or East US 2 or Sweden central despite all steps followed carefully.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Test Queries

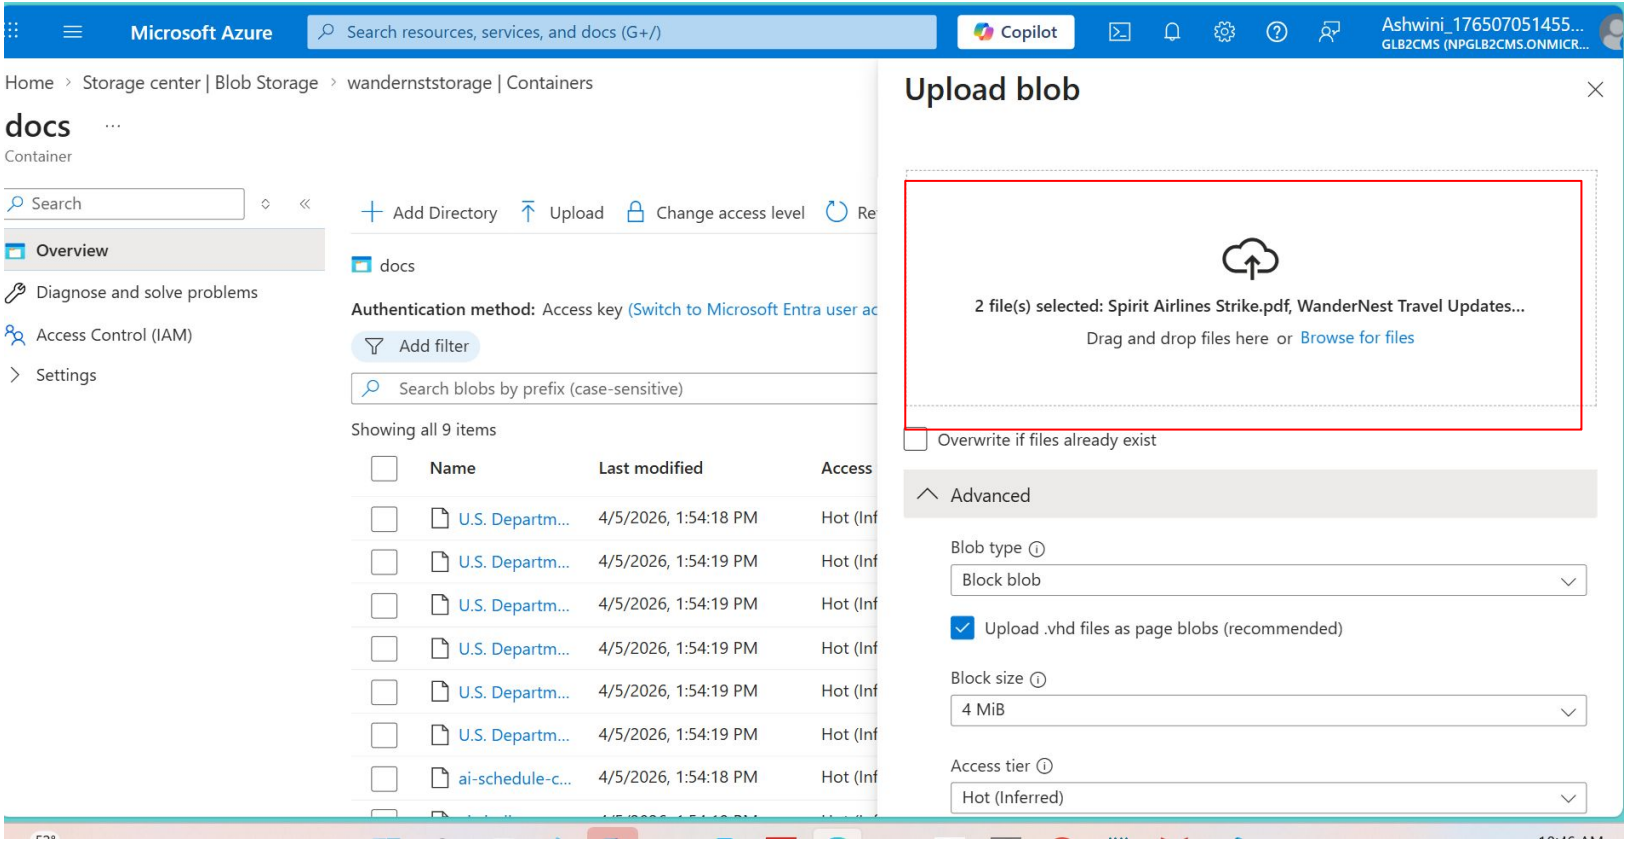

- What is the specific reimbursement percentage for an Air India passenger who is involuntarily downgraded on a domestic flight?
- Does Air India allow a name change on a PNR once it has been created by a travel agent?
- What is the time threshold for a domestic flight reschedule to qualify for a full refund for Air India flights?
- Is a ticket void allowed for domestic travel within India if the flight departs 5 days after ticket issuance?
- For US flights, how many days does a carrier have to issue a refund for a ticket purchased with a credit card?
- Need help. While traveling on my international flight, my bag has been redirected and has been stuck for more than 14 hours. Can I get a baggage fee refund?
- What are the mandatory characteristics of a travel voucher issued to a passenger who cannot fly due to a serious communicable disease?

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Step 6: Updating Documents in Blob Storage

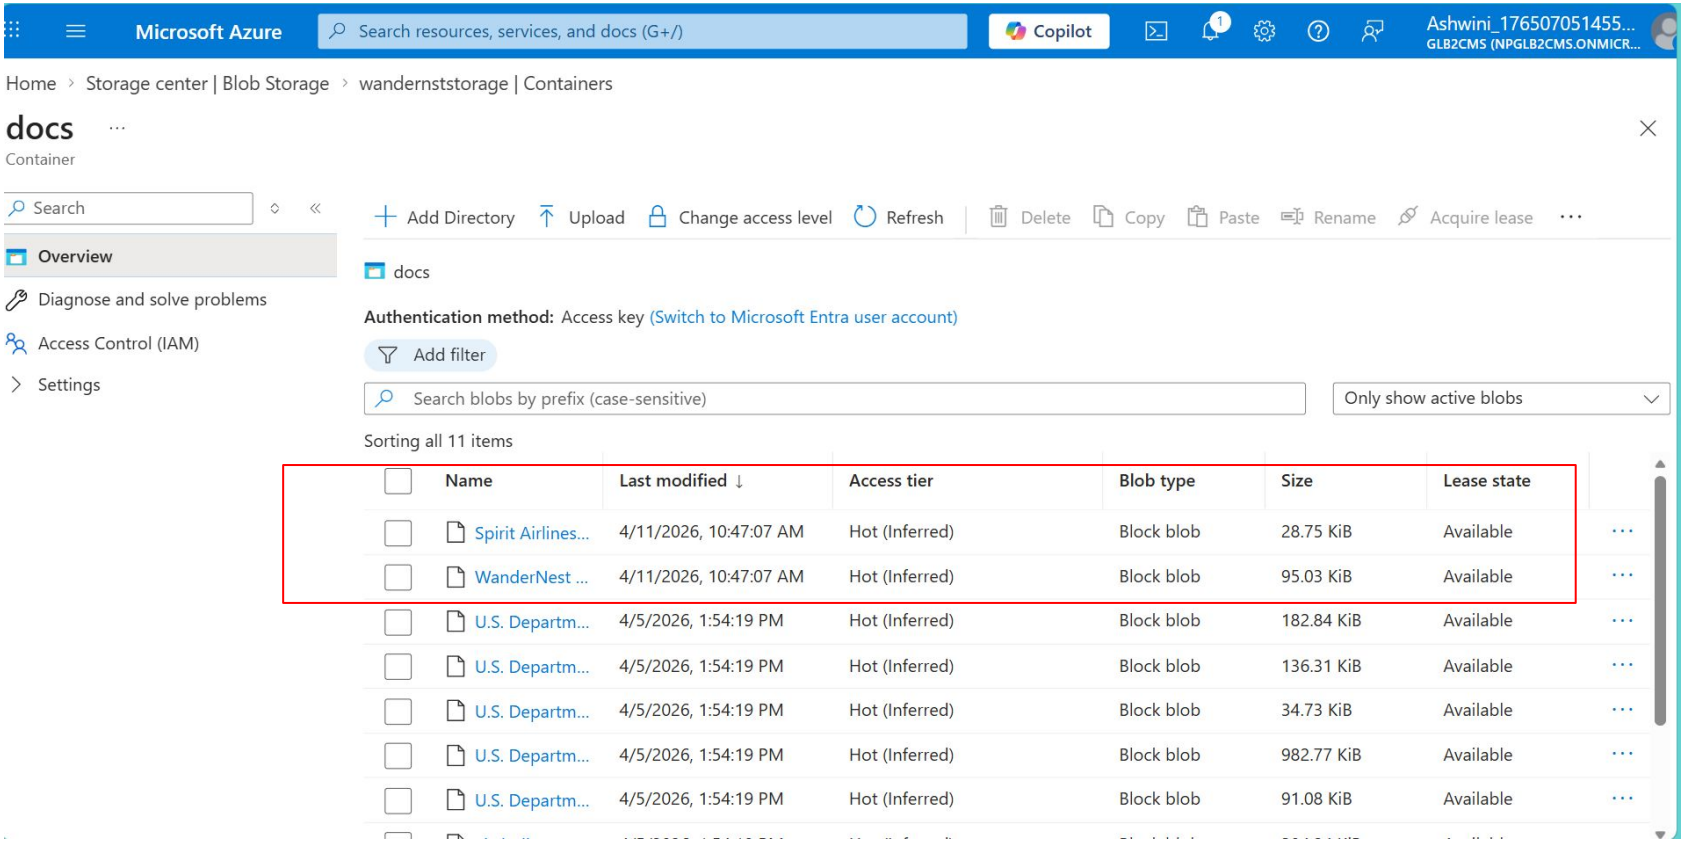

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

6.1 Update the Blob Storage container with documents

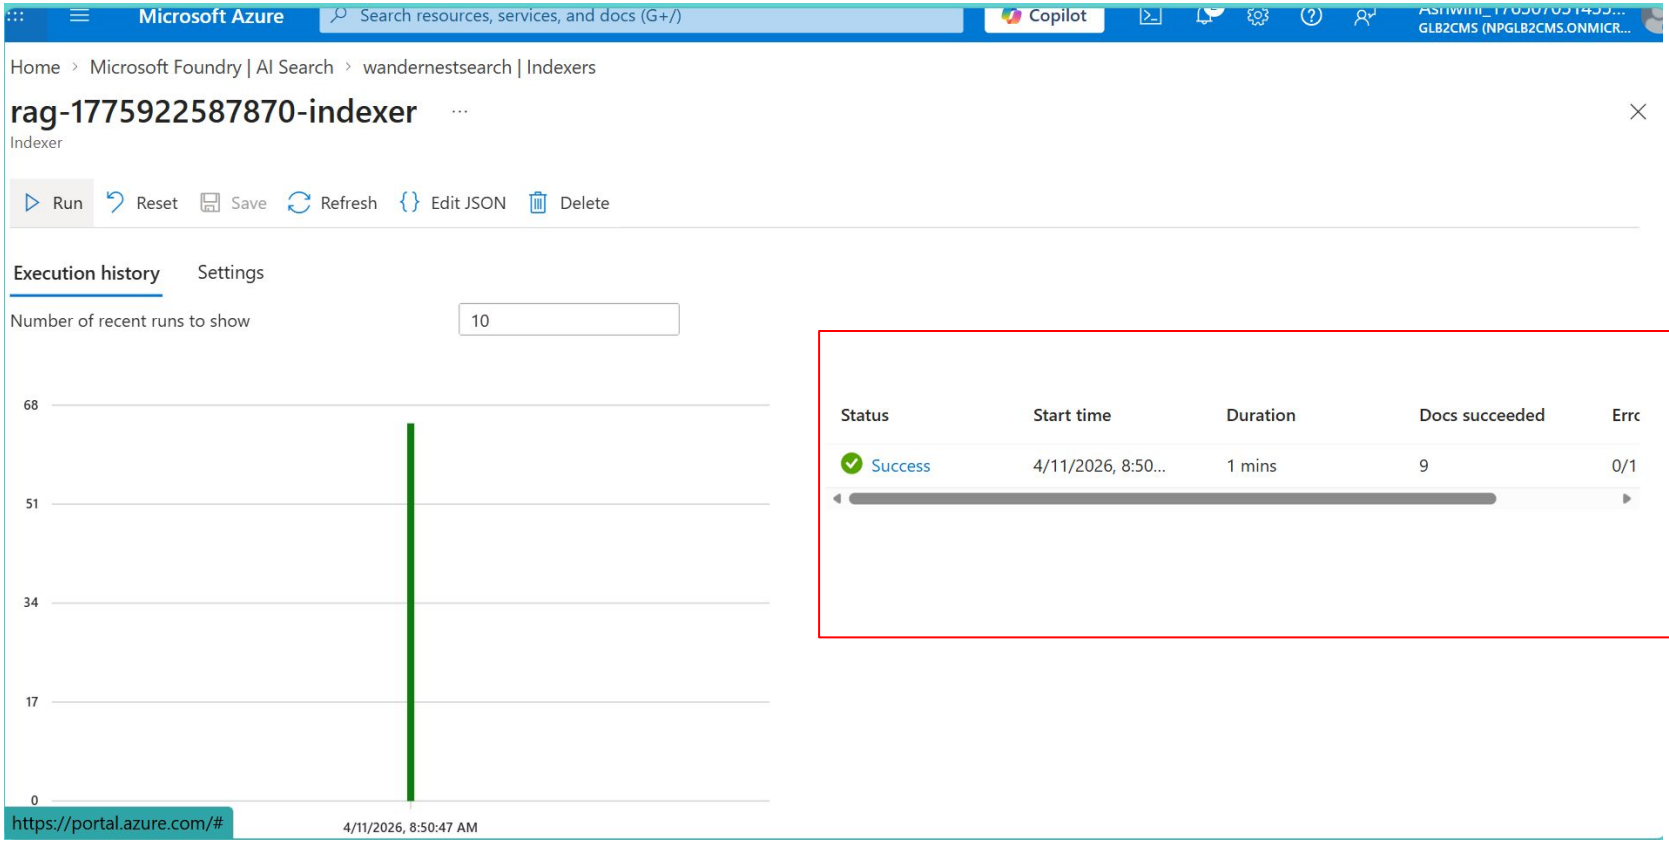

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Updated blobs

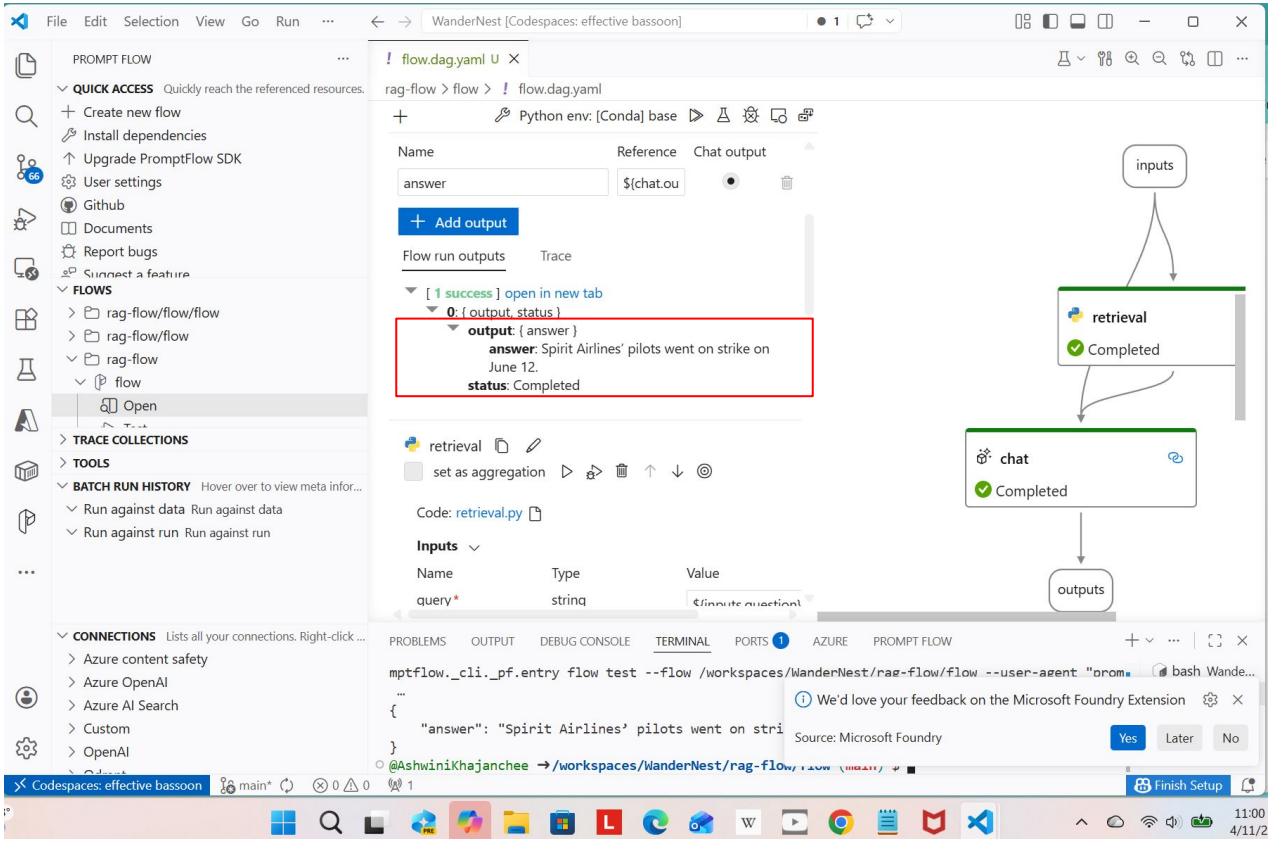

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

6.2 Azure AI Search Index - ran again after adding documents

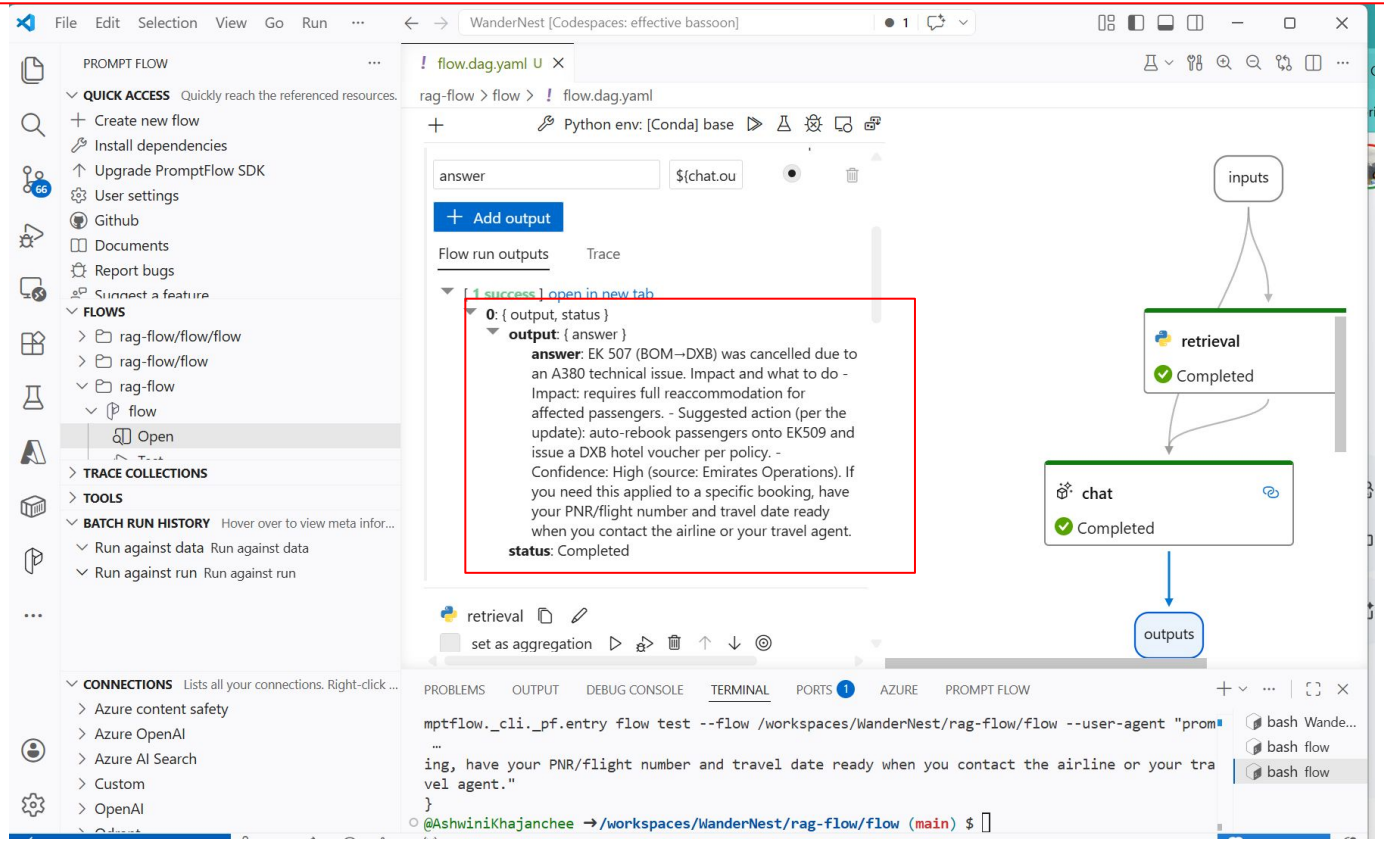

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

6.3 Test the RAG application- When did Spirit Airlines' pilots go on strike?

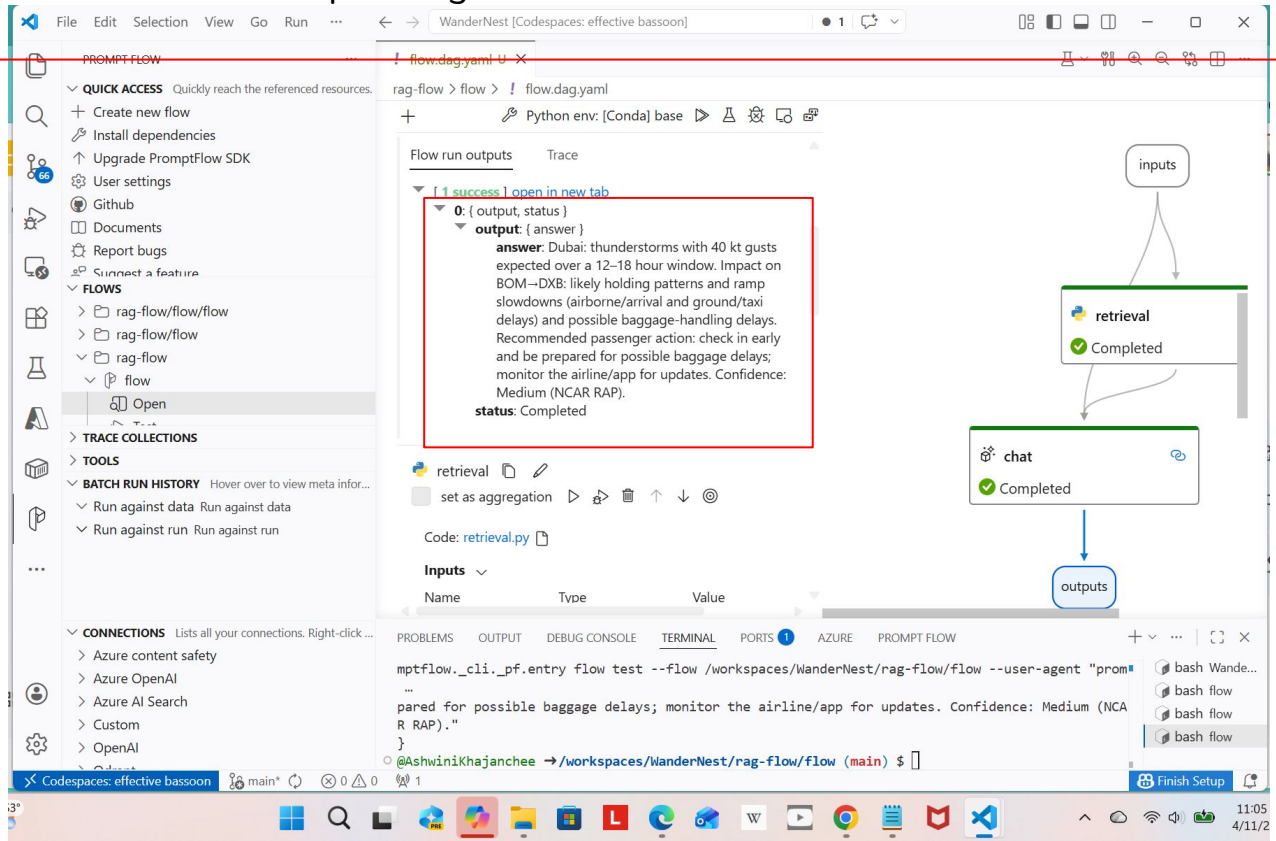

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

6.3 Test the RAG application- Why was Emirates flight EK 507 cancelled? What should affected passengers do?

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

6.3 Test the RAG application- How will the weather in Dubai affect the BOM to DXB segment and what is the recommended passenger action?

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Test Queries

- What is the current status of Air India Flight 133 from BLR to LON? What is the reason for the delay of Air India Flight 133 from BLR to LON?
- Why was Emirates flight EK 507 cancelled? What should affected passengers do?
- What is the status of flight TG 316?
- Is there a disruption in London flights over the next 24-36 hours?
- How will the weather in Dubai affect the BOM to DXB segment, and what is the recommended passenger action?
- What is the new non-refundable fare lock policy for Air India?
- Are there any changes to the carry-on baggage rules for passengers touching EU hubs?
- What is the effective date for the new UK transit visa requirements for Indian nationals with a layover longer than 24 hours?
- There is a strike notice for hotel workers in Dubai. What is the recommended action for customers?

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

Conclusion : Key Takeaways and Business Outcomes

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

7. Key Takeaways

Operational Disruptions

- Spirit Airlines pilots' strike has triggered **systemwide cancellations**.
- Multiple global flights (AI133 BLR→LON, EK507 BOM→DXB) are **delayed or canceled**
- Weather events in London, Dubai, and Bengaluru are creating **multi-hour delays**.

Customer Rights & Policy Requirements

- DOT mandates **full refunds** for canceled Spirit flights, even on non-refundable fares.
- Spirit is **not required** to arrange alternate transportation; customers may need to pursue .
- New policy changes require **immediate updates** to customer-facing guidance.

Travel Advisory & Ground Impact

- Government advisories for Thailand, UK, UAE, and India remain **low to moderate risk**.
- Ground transport disruptions (London Underground works, BLR T2) are increasing risks.

Customer Experience Considerations

- High-impact disruptions require **proactive rebooking**, hotel vouchers, and connection protection.
- Customers need **clear guidance** on vouchers, blackout dates, baggage rules.

Proprietary content. © Great Learning. All Rights Reserved. Unauthorized use or distribution prohibited.

8. Expected Business Outcomes

Revenue & Cost Exposure

- Large-scale cancellations (Spirit strike, Emirates A380 issue) increase refund liabilities, reduce short-term revenue, and raise reaccommodation costs.
- Weather-driven delays create operational inefficiencies, including crew overtime, gate congestion, and compensation claims.

Customer Satisfaction & Brand Trust

- Clear communication on DOT refund rights and voucher restrictions reduces complaints and escalations.
- Proactive disruption handling (auto-rebooking, hotel vouchers, connection protection) strengthens customer loyalty.
- Transparent advisory updates (security drills, weather bulletins, ATC flow control) improve perceived reliability.

Operational Efficiency

- Real-time monitoring of flight disruptions and weather events enables faster decision-making and reduces downstream chaos.
- Integrating policy updates into chatbot and agent workflows reduces manual handling time and improves accuracy.

Strategic Opportunities

- Offering flexible rebooking windows and fare-lock extensions can capture demand during volatile periods.
- Enhancing travel-insurance guidance and cross-selling can offset disruption-related revenue loss.
